elegance in LED lighting

All prices are recommended gross sales prices excluding VAT. Our general terms and conditions apply. Errors and availability reserved. All articles are basically delivered without illuminants, unless the product description specifies otherwise.

5 YEAR MANUFACTURER'S WARRANTY

All DEKO-LIGHT brand products come with a five-year extended warranty.

DEKO-LIGHT lighting solutions have always stood for maximum reliability and performance based on strict quality guidelines. For example, the products are regularly checked during the development and production process in order to provide users from all sectors with a fault-free product. The extension of the manufacturer's warranty underlines this quality promise once again.

LIGHT COLOUR SELECTABLE

Luminaires with the designation "CCT Dip" allow you to change the light colour via a small dip switch [usually in the steps 3000K / 4000K / 5000K]. With their high application flexibility, CCT Dip luminaires offer customers who are still unsure about the light colour an enormous decision-making aid - and incidentally reduce your stock requirements.

The colour temperature [light colour] is specified in Kelvin [K] and determines how the respective light is perceived.

WW = Warm white light	2,300 K to 3,300 K [high red component].
NW = Neutral white light	3,300 K to 5,300 K
CW = Cool white / daylight white light	5,300 K to 8,000 K [high blue content]

The following guide values apply as orientation for different rooms following guide values apply:

living and sleeping are	WW
kitchen and bathroom	WW NW
offices	NW
industry	NW CW
photo studio / architectural lighting	CW

COLOUR RENDERING INDEX RA

The colour rendering index Ra is the measure of the correspondence of the perceived light colour between an existing lighting situation and a reference light source. The smaller the deviation, the better the colour rendition. A light source with Ra 100 reproduces all colours exactly. The lower the Ra value, the less precisely the colours are reproduced.

Standard values:	
Incandescent bulb, halogen lamps	up to Ra 100
LED lamps	Ra 75-95
Compact fluorescent and energy-saving lamps	Ra 80-89
Fluorescent lamps	Ra 70-85

RA 70-80 medium colour rendition

RA 80-90 good colour rendition

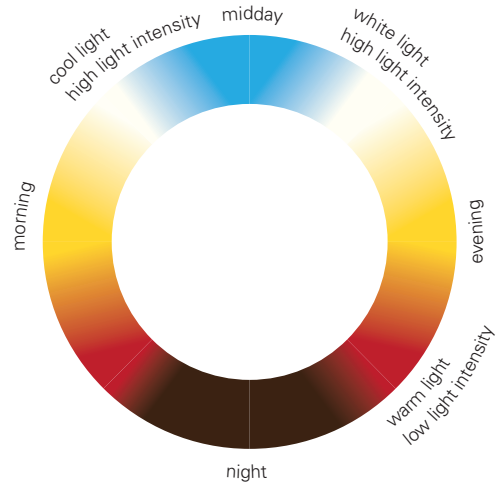

RA 90-100 very good colour rendition

HCL

HCL stands for "Human Centric Lighting" and means the simulation of lighting situations according to the biological day-night rhythm of humans. HCL matches artificial light indoors to natural daylight and promotes well-being, mood and health. Numerous DEKO-LIGHT luminaires can already be integrated into an HCL control system to adjust the light colours to the biorhythm. In addition, several LED stripes in different light colours can be combined in one profile and thus integrated into the HCL lighting design.

UGR VALUE

The smaller the UGR value, the more glare-free a luminaire emits its light. Especially in office areas, luminaires with a UGR value of less than 19 should be used to avoid disturbing reflections. When determining the UGR value of a complete room, additional factors such as wall colour[s] and surface finishes play a role.

DIM TO WARM

With the dim-to-warm function, you not only adjust the luminous intensity downwards, but by simultaneously changing the light colour [e.g. from 3000 to 2000 K], you obtain a room mood adapted to the new situation. LED luminaires with dim-to-warm technology can therefore be used particularly flexibly.

DALI-DIMMABLE

Luminaires that can be dimmed via DALI can be perfectly integrated into lighting/property management systems. The great advantage lies in the wiring: via DALI, all luminaires in a line can be individually addressed and controlled.

But this variant is also suitable for individual luminaires: DALI dimmers without an address exist for this purpose, which address the power supply unit directly. The good news: most systems on the market already have DALI interfaces.

HIGH LUMEN PACKAGE

Luminaires with high lumen values are ideal for illuminating rooms or corridors. With the right wall luminaires, you can achieve the prescribed lux values for corridors [100 lux] in many cases without additional ceiling lighting.

WHAT IS HOW BRIGHT?

How many lumens do different lamps shine with?

candle	~ 12 lm
100W incandescent bulb	~ 1.340 lm
40W fluorescent lamp	~ 3.000 lm

WHERE DO I NEED HOW MANY LUMENS?

You should plan for these lumens per square metre, so that your home is optimally and comfortably illuminated:

guide values:	
living room	approx 140 lm/m ²
bedroom	approx 140 lm/m ²
children's room	approx 140 lm/m ²
hallway	approx 140 lm/m ²
study	approx 280 lm/m ²
kitchen	approx 280 lm/m ²
bathroom	approx 280 lm/m ²

HOW MANY LUMENS CORRESPOND

HOW MANY WATT?

Luminous efficacy is measured in lumens per watt [lm/W] and indicates how efficiently a lamp shines and how energy is converted into light.

guide values:	
incandescent bulb	approx 10 lm/W
halogen lamp	approx 20 lm/W
fluorescent lamp	approx 70-90 lm/W
LED lamp	approx 60-170 lm/W

WHAT DOES "LUX" MEAN?

Lux [lx] is the physical unit of the illuminance of a light source. This photometric quantity indicates how much luminous flux from a light source falls on a given surface.

Of course, the following values do not have to be achieved in the entire room.

guide values:	
bedroom	45 Lux
living room	77 Lux
bathroom	110 Lux
hallway	207 Lux
study/office	300 Lux [at desk: 500 Lux]

IK-VALUE

In addition to the IP protection class, you should also keep an eye on the IK value of a luminaire, which is increasingly required within the scope of tenders and for installations in public spaces. The IK value [or IK impact resistance level] indicates how impact-resistant a luminaire or certain components are. IK00 offers no protection against external mechanical stress, IK10 or IK10+ means that the luminaire can withstand a 5 or 10 kg test weight from a distance of 40 or 50 cm.

There are eleven codes, corresponding to the impact energy that an enclosure can withstand. [Source: wikipedia.org]

code	impact energy in joules	corresponds to drop height in mass	
IK00	no protection		
IK01	0,14	7 cm	- 200 g
IK02	0,20	8 cm	- 250 g
IK03	0,35	14 cm	- 250 g
IK04	0,50	20 cm	- 250 g
IK05	0,70	28 cm	- 250 g
IK06	1,0	40 cm	- 250 g
IK07	2,0	40 cm	- 500 g
IK08	5,0	25 cm	- 2000 g
IK09	10,0	20 cm	- 5000 g
IK10	20,0	40 cm	- 5000 g
IK10+	50,0	50 cm	- 10000 g

CHANGEABLE LED CHIPS

We want to leave our children a world worth living in. With the advent of LED technology, many luminaires could no longer be repaired and became disposable products. Thanks to a high recycling rate, a large part of the raw materials can already be returned to the system - nevertheless, we want to do even better: Ideally, the LED or the POWER SUPPLY of every DEKO-LIGHT luminaire can be replaced in the event of a malfunction. With the new Green Label "LED chip replaceable", the DEKO-LIGHT brand is sending an unmistakable signal: Luminaires with this label enable environmentally friendly replacement of LED chips. In combination with low power consumption and a long service life, DEKO-LIGHT luminaires are already helping to reduce the burden on the environment. Support us in this and look out for the Green Label at DEKO-LIGHT.

WHAT IS THE "AVERAGE RATED LIFE" OF AN LED?

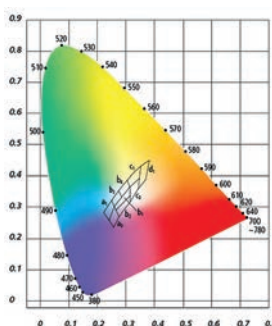

The average rated service life of LEDs covers the period from the first time they are switched on until the time when only 50 percent of the LEDs tested are still functioning properly.

A specified service life of 30,000 hours for an LED stripe therefore means that after this period, on average, half of all stripes will have failed.

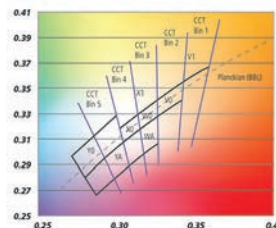

WHAT DOES "BINNING" MEAN?

Binning guarantees a constant quality of light with the same brightness level and uniform light colour. For this purpose the LEDs of a production batch are sorted and divided into so-called "bins".

NORM TABLE

BINNINGS

WHITE LEDS

IP PROTECTION ZONES

ZONE 3 | IP23

Outside zones 0 to 2, no special IP protection is necessary, provided no cleaning with direct water irradiation takes place.

ZONE 2 | IP44

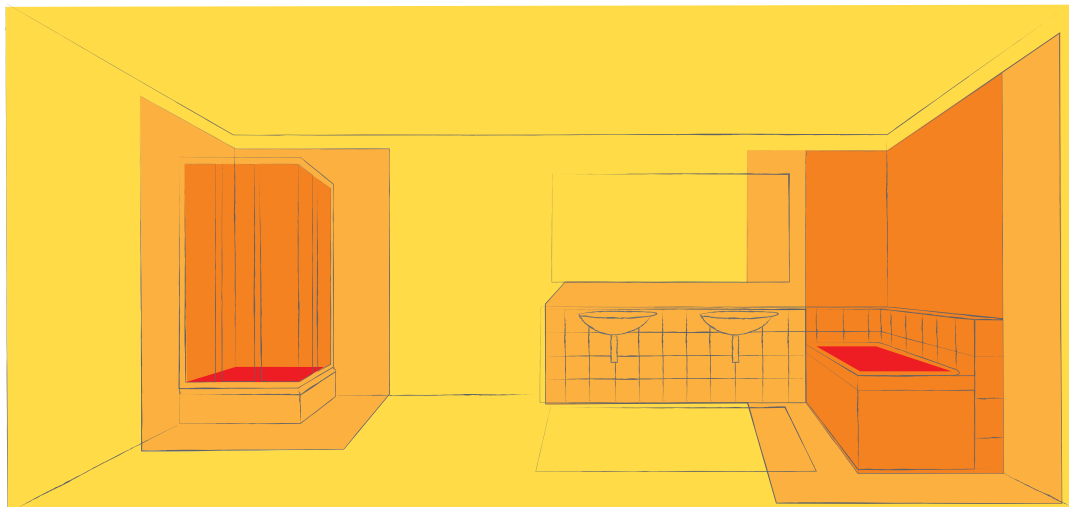

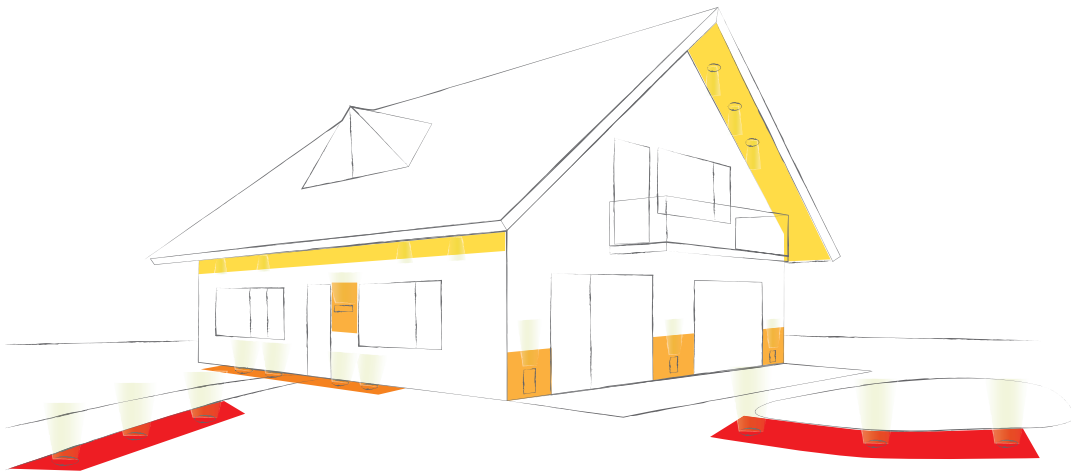

In the areas 60 cm from zone 1, IP X4 protection applies.

ZONE 1 | IP65

In the wall area of the shower as well as in the tile area exposed to IP X5 is specified for the wall area of the shower and in the tile area exposed to splash water [max. 50 V].

ZONE 0 | IP67

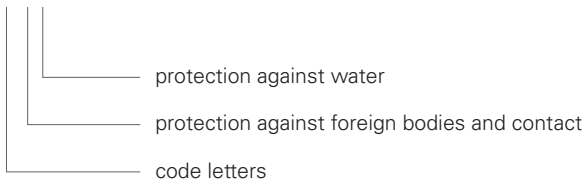

In bathtubs and shower trays, low-voltage [max. 12 V] is absolutely required. The minimum IP protection is IP X7 [protected against water penetration].

PROTECTION TYPES AND INSULATION CLASSES

Luminaires and other electrical appliances have a housing that protects live parts from contact, moisture or other environmental influences. This protection depends on the respective area of application. In order to have an overview of the suitable application, all devices are assigned to a classified protection type and an insulation class.

IP67

1. digit	protection against foreign bodies and contact	2. digit	protection against water
0	no protection	0	no protection
1	large foreign bodies [Ø > 50 mm] large body parts [e.g. back of the hand]	1	protection against vertically falling dripping water
2	medium-sized foreign bodies [Ø > 12 mm] finger	2	protection against dripping water falling at an angle [up to 15°].
3	small foreign bodies [Ø > 2,5 mm] tools and wires [Ø > 2,5 mm]	3	protection against water spray up to 60° from vertical
4	granular foreign bodies [Ø > 1 mm] tools and wires [Ø > 1 mm]	4	protection against splashing water on all sides
5	dust deposit complete protection against accidental contact	5	protection against jet water
6	dust entry complete protection against accidental contact	6	protection against strong jets of water
		7	protection against temporary immersion
		8	protection against permanent immersion

HIGH QUALITY MATERIAL MIX

The MADERA series is made of first-class European oak wood and impresses with its modern design and mix of materials in private living areas, hotels, restaurants and many more. The noble MADERA luminaires distribute their powerful warm white light in any room and thus also cut an excellent figure as functional and high-quality lighting at reception counters and more.

You can find more information on the following pages:
ceiling light 348147 | page 112
pendant lamp 342169 | page 86
wall light 341248 | page 134
table lamp 346044 | page 220

QUICK FACTS

- modern, exclusive design
- manufactured in Europe from high-quality oak wood of quality class A
- FSC-certified raw material oak wood
- high light intensity

THE HEAD

The head is the starting point and centre of the MIRAM-series and, thanks to its magnetic fastening, can be combined with all holders. Once charged via a USB-C cable, the head lights up for more than 10 hours and can be dimmed continuously via a touch switch. dimmer via a touch switch.

THE WALL HOLDER

With the easy-to-mount wall bracket via two screws, you can use the MIRAM head on exterior and interior walls. Thanks to the compact dimensions of the entire series, you can easily use several brackets and heads in a small space.

THE STAND

With the stand, the MIRAM becomes a mobile table lamp - whether for a spontaneous round of skat on the terrace, as an individually dimmable lamp in cafés or as a colourful desk lamp that provides children with light for their homework even in the cold, dark season.

THE PENDANT

The trapezoidal pendant makes placing the MIRAM particularly easy: no drilling, no screwing - simply wrap it around a pole, beam or sturdy tree branch and the MIRAM will light up even a picnic in the great outdoors.

COLOURFUL FLEXIBILITY

The MIRAM is THE luminaire for almost all wireless outdoor applications. The combination of a central, magnetic luminaire head and interchangeable holders - each in seven colours - set no limits to creativity. Whether as a wall, table or pendant luminaire - with the battery-operated MIRAM series, you can bring light anywhere: in the garden, outdoor restaurants, as ambient lighting or in the children's room. Charging is quick and easy via USB-C. In addition, the MIRAM is infinitely dimmable via the integrated touch switch.

More information can be found from page 250.

QUICK FACTS

- type: rechargeable magnetic luminaire
- connection: USB-C
- diameter: 12 cm (head)
- material: die-cast aluminium
- light colour: 3,000 K, warm white
- IP54
- colours: yellow, blue, green, red, black, white, grey

MIRAM

LIGHT - ALL AROUND

The ALHENA is a thoroughly modern floor luminaire for outdoor use: a slim housing paired with an impressive 360° light distribution and high energy efficiency. What's more, thanks to its SMD construction, the towering ALHENA not only serves to illuminate gardens, car parks, walkways and more, but also impresses with its timeless design as a visual eye-catcher when switched off.

More information can be found on page 297.

With the kind support of Arte Classica Schinzel / www.arte-classica.de

QUICK FACTS

- timeless design
- all-round lighting [360° light distribution]
- UV-resistant
- high energy efficiency

ALHENA

VARIABLE INSTALLATION DIMENSIONS

Recessed ceiling luminaires can be discreetly integrated into both private and commercial spaces, but when a replacement is due, the existing ceiling cut-out can become a problem. The ZAURAK series comes with an adjustable mounting bracket that allows larger or smaller ceiling cut-outs to be used. In addition, the ZAURAK has a low installation depth for universal use. The scope of delivery includes two interchangeable cover rings in silver and black.

More information can be found from page 484 onwards.

article	ceiling cut-out	colour	temperature	luminous flux
565327	65 - 160 mm	3000/4000/5700 K		1060 lm
565328	120 - 200 mm	3000/4000/5700 K		1750 lm
565329	150 - 270 mm	3000/4000/5700 K		2420 lm

QUICK FACTS

- light colour adjustable via switch [CCT Dip]
- adjustable mounting bracket for different cut-out dimensions
- 230V direct connection
- through-wiring possible
- silver and black cover ring included in delivery
- low installation depth - universal use

ZAURAK

ALL-ROUNDER AT A FAIR PRICE

Anyone looking for a slim, powerful, energy-efficient and flexibly usable 3-phase spotlight will not get past HORUS. The slim housing and matt finish of the surface, combined with the powerful chip through all wattages, make the HORUS spotlights a true all-rounder in salesrooms, hotels, the catering trade and other commercial application areas.

More information can be found from page 654.

HORUS

QUICK FACTS

- super price-performance ratio
- >100 lumens per watt
- high energy efficiency

DOWN TO THE LAST CORNER

The perfect effect of linear light depends not only on the LED stripe used, but especially on its clever placement. For use in ceiling and wall coving, suspended ceilings and other indirect lighting scenarios, DEKO-LIGHT has a 135° angle profile in a modern, timeless design in its portfolio. Manufactured made of high-quality aluminium with high dimensional accuracy and dimensional stability, the angle profile can be easily shortened to the individually required length and precisely integrated into both private and commercial rooms.

You can find more information on page 742.

QUICK FACTS

- high quality aluminium
- high dimensional accuracy
- high dimensional stability
- can be easily shortened to desired length
- modern timeless design

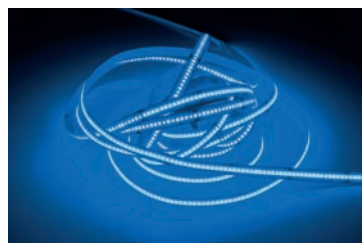

135° angle profile

INTENSIVE PLAY OF COLOURS

LED stripes with COB technology enable particularly homogeneous light. The COB RGB stripe from DEKO-LIGHT places 840 RGB LEDs on a one-metre length and offers lighting designers and electricians the ideal combination of rich, intense colours, flexible illumination and easy installation, as the stripes can be quickly and easily shortened to the individual desired length - for use in the kitchen, living room or bedroom and much more.

For more information, see page 830.

LED stripe COB RGB

QUICK FACTS

- homogeneous light thanks to COB technology
- high flexibility
- can be easily shortened to desired length
- COB 840 LED/m
- intensive colour rendering

MULTITALENT

A must for every electrician: the new MULT-CC DALI 2.0 power supply units from DEKO-LIGHT are a real all-purpose weapon for universal use.

They can be controlled via DALI1 or DALI2 [fully upward and downward compatible] or via Intelli-Push. The multi-current power supply units do not require any additional control components and are controlled by means of cost-effective 230V standard push-buttons. With the new Intelli-Push function, they also have a pioneering synchronisation option if one of the connected POWER SUPPLIES no longer runs synchronously with the others.

In addition, the MULTI power packs can also be operated without control, undimmed, as a reliable and universal power supplier. With a total of five models, the new DALI series covers a CC current range from 180mA to 1600mA and power ratings from 4 to 75 watts.

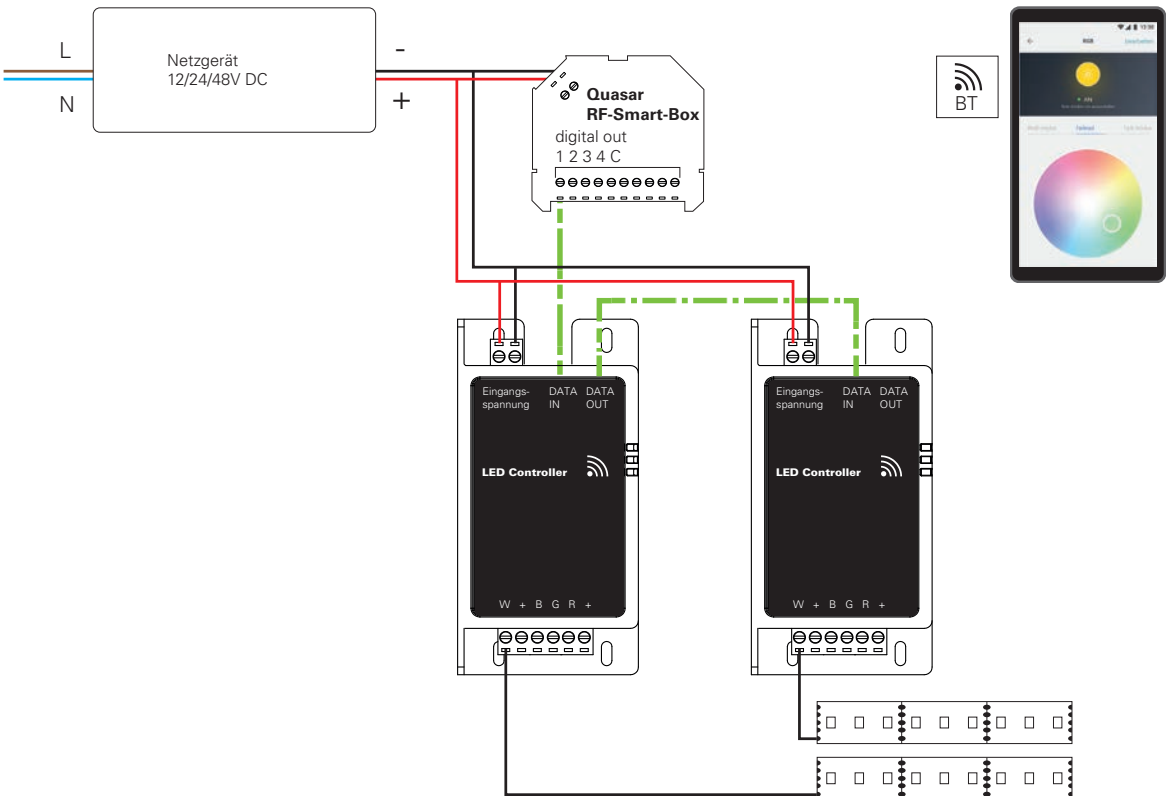

More information can be found on page 922.

QUICK FACTS

- these POWER SUPPLIES are a super all-purpose weapon - universally applicable
- with Dali1/2 control, fully upward and downward compatible
- new Intelli-Push function [controllable with one or more simple 230 push-buttons]
- no additional control components necessary

Multi-Current DALI 2.0

NOW EVEN SMARTER

The small blue RF Smart Box is a real all-rounder, because on the one hand it makes it possible to operate an existing LED stripe installation, which was previously controlled with the popular DEKO-LIGHT RF system via remote control, can now be operated with a smartphone and thus benefit from the possibilities and advantages of a modern control system.

The conversion is very simple: connect the RF Smart Box to the existing LV power supply, plug it into the RF controller and you're done! Afterwards, the app, which is available free of charge, can be put into operation and adapted accordingly.

Furthermore, in future there will be no performance limits to your planning with Quasar. Using the RF-Link control signal, you can control one or more RF controllers connected with RJ45 cables simultaneously. In this way, you can also realise high performance requirements of more complex or extensive installations.

For more information, see page 942.

QUICK FACTS

- stand-alone or networked operation
- digital output signal [RF-Link] for control of DEKO-LIGHT RF controllers [Single, WW/CW, RGB, RGBW see p. 946]
- adjustable and freely configurable: colours, brightness, programmes, speed
- data transmission via state-of-the-art BT mesh technology

Quasar

COLOURFUL DIVERSITY

The LED E27 RF RGBW is a versatile light source for E27 sockets that can be controlled and dimmed via the supplied RF remote control at a range of up to 20 metres. Adjust the light colour in the RGBW colour range, access 12 effect programmes or save your own presets thanks to the integrated memory function and address several lamps at once if required. The application possibilities are almost unlimited.

QUICK FACTS

- dimmable and controllable via RF remote control - 20 metre range
- light colour adjustable
- 12 effect programmes and memory function
- several lamps can be addressed

LED E27 RF RGBW

THE SECURE CONNECTION

Our multi-outdoor cable junction boxes ensure clean cable management in gardens, parks and other outdoor areas and protect your cables against various outside influences. The junction boxes are supplied with various adapter sleeves to connect cables with different cross-sections in a watertight manner (M20 or M25 cable glands). The waterproof cover, which is also screwed on, allows subsequent access to the laid cables. Unused connections can be secured with the supplied blanking plugs.

QUICK FACTS

- access to cables via screwed, waterproof cover
- supplied blanking plugs for unused cable entries
- waterproof cable gland
- incl. adapter sleeves for different cable cross-sections

DIVERSITY

As colourful as life itself - with DIVERSITY we set an example for more colour and diversity. The pendant luminaire series based on a patented design by Johannes Tomm offers a choice of seven colours and can be combined as desired. With a cable length of 3 metres, DIVERSITY is also convincing in high rooms. The retrofit compatibility with all E27 light sources of the A60 design allows even more variety.

DIVERSITY

- Design by Johannes Tomm
- wide range of colours
- Retrofit [replaceable E27 bulb]
- suitable for all E27 bulbs of type A60
- 3m cable length
- metal

ASTEROPE

Light & shadow: Hardly any luminaire embodies this dualism more beautifully than the ASTEROPE in its various versions. The downward-opening pendant luminaire creates a multifaceted play of light and shadow on walls and ceilings that blends extravagantly yet harmoniously into any ambience. Our tip: Combine the ASTEROPE with a gold-coloured or milky light source from the Filament series.

MEROPE

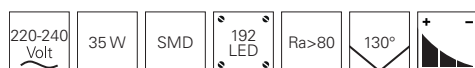

The pendant luminaires of the new MEROPE series combine timeless elegance and reduced modernity. Available in the diameters of 480 mm and 780 mm, the MEROPE series 192 or 360 warm white LEDs [3000 K] along the inside of the its slender, airy round shape and illuminates rooms with an astonishingly powerful 3000 or 5000 lumens. The outside is made of brushed aluminium in the colours of colours white, silver and coffee. We are sure that especially the latter colour scheme will set a new trend...

CENTAURI

Eye-catcher for any room - with the CENTAURI pendant luminaires in a chrome-plated silver look, you can give any room a modern design character. A total of seven aluminium spheres with GU10 light sources [max. 50 watts] form a unique luminaire structure above tables, work surfaces and other living objects, which is in no way inferior to the constellation that gives it its name in terms of fascination and effect.

PAVONIS & CYGNI

Concrete - a timeless companion. In the meantime, the functional and visual advantages of this ubiquitous material have also reached the lighting industry. Due to the stability of concrete, even large luminaires can be built narrowly. Our PAVONIS & CYGNI models combine the timelessly modern concrete look with elegant brass or chrome surfaces.

For this photo, the light sources 180057 for the PAVONIS and 180062 for the CYGNI were used.

TWISTER

Elegant design with innovative details meets exceptional choice of materials: The TWISTER series combines decorative floor, table and pendant luminaires in different sizes, made entirely of plaster. We turn the cable into a design element! Entirely in classic white, the luminaires are only interrupted by a red cable. This makes the TWISTER series an eye-catcher not only in living areas, but also in hotels or restaurants.

ORBIT

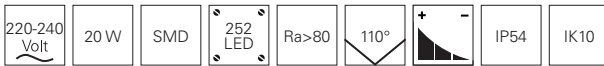

The ORBIT is a modern surface-mounted ceiling luminaire that offers more than is apparent at first glance. In addition to its high light output [optionally in warm white or neutral white] and a 360° beam angle for perfect area illumination, the ORBIT can be converted into a chic pendant luminaire via an optional wire suspension. For those who need even more flexibility, the ORBIT can be combined with the ZANIAH series, which is also new.

ORBIT

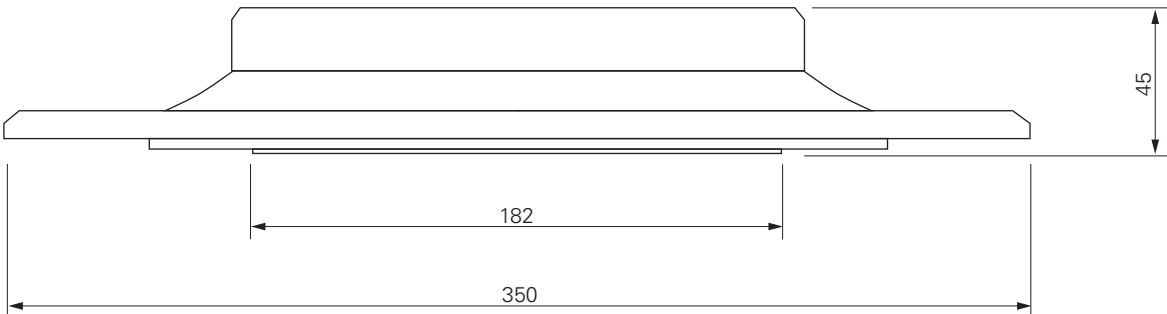

- modern design
- high luminous intensity
- 360° beam angle

---------------	--------------------------	-----------------------------	----------------

ZANIAH

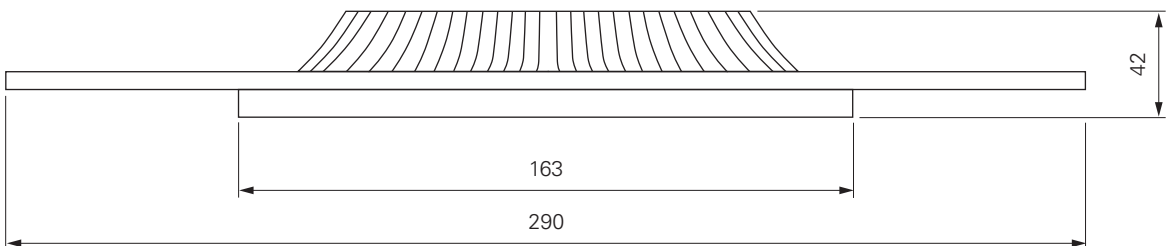

While most surface-mounted ceiling luminaires focus on flat surfaces and covers, the ZANIAH deliberately places its 360° light source [optionally available as 12W, 18W and 24W versions] in the foreground. This is not only for optical reasons, because the ZANIAH can be combined with the covers of the ORBIT series, which is also new. In this way, not only are different RAL colours available – the ZANIAH itself is also available in eight colour variants per power class.

ZANIAH 12W

MENKAR

The surface-mounted ceiling luminaires of the MENKAR series can be perfectly combined with the MIRACH luminaires – after all, they come from the same luminaire family. Like the MIRACH and the MEROPE, the MENKAR also relies on the elegant outer aluminium ring in white, silver or coffee finishes. In addition, the MENKAR has a rear light with an independent power supply unit. In this way, corridors can be provided with discreet indirect light throughout, while the main light is only switched on when necessary [e.g. by a motion detector].

MENKAR

- **separately switchable backlight, 7W**
[in combination with a series switch]
- **timeless design**
- **high luminous intensity**
- aluminium
- dimensions H x Ø: 90 x 400 mm
- dimmable via leading or trailing edge

348131	<input type="checkbox"/>	coffee brushed	<input type="checkbox"/>	3000 K	3460 lm	159,95 €

MIRACH

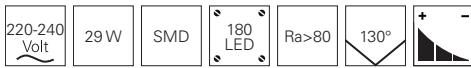

The timeless MIRACH impresses with its high luminous intensity and low installation height, as well as it is also a real visual eye-catcher thanks to the elegant outer aluminum ring - which is available in sandblasted white, in a brushed finish in silver or the trendy color coffee. Available in diameters of 380 mm and 580 mm, MIRACH can be integrated even more flexibly into a wide variety of environments.

MIRACH 380 MM

- timeless design
- low installation height
- high luminous intensity
- aluminium

LIGHT POINT PERNO

The LIGHT POINT PERNO is a swivelling LED recessed ceiling luminaire that impresses with its compact and filigree form. The 360° swivelling, silver-coloured interior luminaire offers a tilt angle of 30° and is suitable for flexible illumination of displays, shop windows and exhibitions in the furniture sector. The LIGHT POINT PERNO has an aluminium housing and is available in warm white.

COB 68 ACRYL

A spotlight with that certain something: thanks to its acrylic ring, the COB 68 ACRYL emits light not only downwards but also softly to the side. The resulting play of light on the ceiling makes for a discreet but effective eye-catcher and bathes every room in a cosy ambience.

SMD-68-230V-2700K-RUND

A lot of power for a small price! The recessed luminaires of the SMD-68 series provide up to 550 lm and also have an integrated, dimmable power supply unit [230V direct connection], which makes the use of GU10 sockets and retrofit upgrades unnecessary.

COB BACK LIGHT

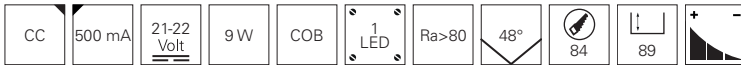

Designed as a recessed ceiling luminaire for indoor use, the COB BACK LIGHT is equally suitable for classic and modern interiors and architectural projects. The 9 Watt COB warm white LED with 48° beam angle sits in a white die-cast aluminium housing and creates additional, indirect light via the integrated reflector for even more atmosphere in the room.

LESATH

In various shapes and surface finishes, the LESATH swivel-mounted recessed ceiling luminaire can be used in a wide variety of applications - from retail and gastronomy to private living spaces. Additional flexibility for planners, architects and electricians is provided by the warm white light source that can vary its colour temperature [2000 – 2800 K] by dimming via phase control. The integrated power supply unit for the 7 Watt LED ensures easy installation.

BERMUDA II

Clear design language, visual highlight! With the BERMUDA luminaire series developed by our designer Johannes Tomm, you can create a feel-good atmosphere far away from the typical »0815«.

Whether elegant wall lamp, unusual table and floor lamp or even the lighting of your garden – the BERMUDA series gives every lighting situation its own special touch.

ASTEROPE LINEAR

Light & shadow: Hardly any luminaire embodies this dualism more beautifully than the ASTEROPE in its various versions. The wall luminaire, which is open at the top and bottom, creates a multifaceted play of light and shadow on walls and ceilings that blends extravagantly yet harmoniously into any ambience.

ARIETIS

A modern wall lamp with outstanding design and glare-free light. The ARIETIS impresses with its clear line, the beautiful and very elegant finish in polished aluminium and convinces completely with the built-in G9 socket. This gives you the possibility to choose the right illuminant for you. Whether halogen or LED, warm white or cool white, you have the strings in your hand. Hardly any other luminaire emphasises your modern lifestyle like the ARIETIS.

ARIETIS

ACAMAR

Small, noble, elegant and unobtrusive – the ACAMAR is a luminaire made of high-quality aluminium. The colour rendering value is over 90, which means high colour fastness. The design is chic and interesting due to the single-sided rounding. You can mount the luminaire with the rounding upwards or downwards, depending on your preference. The white lacquering on the inside emphasises the warm white light and distributes it pleasantly upwards and downwards. The outside is highly polished and thus shines in full brilliance.

ACAMAR

- aluminium diecast
- dimensions L x W x H: 170 x 100 x 80 mm

With the kind support of Regionaldirektion für Deutsche Vermögensberatung Pierre Werner / Direktion für Deutsche Vermögensberatung Uwe Liebholz

KEOPS

Thanks to its simple design, the KEOPS LED wall-mounted luminaire blends seamlessly into a wide variety of room interiors and provides flexibly applicable, indirect lighting accents. This is ensured by the innovative dimming function of the interior luminaire, on the basis of which the colour temperature can be continuously adjusted in the range from 3000 K [100%] to 2000 K [0%]. In this way, KEOPS creates a different, indirect lighting mood as required – from room light to dignified ambient light.

KEOPS

- aluminium diecast
- dimensions L x W x H: 170 x 155 x 115 mm
- socket L x W x H: 120 x 58 x 33 mm
- dimmable via leading or trailing edge

PARALA & LARGA

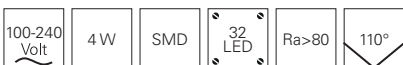

The simple PARALA and LARGA wall-mounted luminaires impress with their linear design and high-quality aluminium housing, which is available in two different finishes. However, they not only set the stage with their modern housing shape, but also create a pleasant lighting atmosphere with their indirect warm white light source.

YPSILON

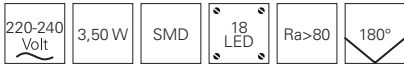

Geometric design and maximum variability – the YPSILON consists of two parts, a base and the name-giving interchangeable Y-part. Thanks to the round base and the variable mounting, one or more YPSILON luminaires can be used to create highly interesting light effects on walls. Just a few degrees of rotation creates a completely different light image. Thanks to the many different materials, e.g. white plaster, which can also be customised, or grey granite, almost impossible variations can be conjured up.

CREATIVE IDEAS FOR YOUR PLASTER LUMINAIRES

Plaster luminaires are very easy to design individually. After priming [e.g. with deep primer], you can paint, spray, varnish or even glue on the plaster surface. Experienced designers carefully remove or apply material and thus create a real one-of-a-kind luminaire – as in the three examples below, which were individually designed and have since caused a stir not only in the living room, hallway and staircase area, but also in the children's room...

ILARIA

built in wall lights

ALWAID

ALWAID is your problem solver when space is tight. Thanks to its small design, the recessed wall luminaire fits into all 68 mm deep switch boxes and does not require a power supply unit.

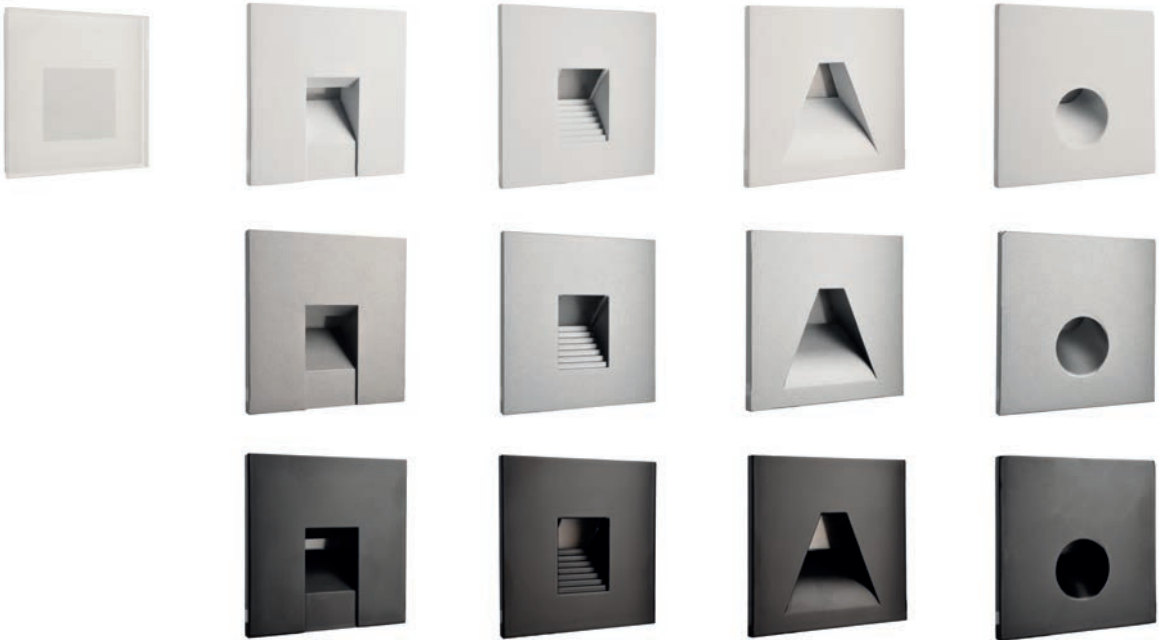

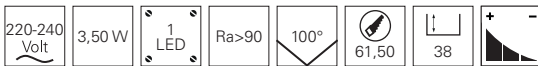

With its numerous covers, it blends safely into its surroundings and presents a beautiful indirect light that can be dimmed.

ALWAID

- aluminium diecast
- dimensions H x Ø: 40 x 71 mm
- dimmable via leading or trailing edge
- suitable for 68 mm switch boxes in deep version

ALWA

The ALWA combines two luminaires in one sophisticated design: a bedside luminaire with indirect shade lighting and a reading spot. The highlight is the rotatable and swivelling arm [tilt angle: 90°], which enables the ALWA to provide targeted illumination. With its narrow beam angle of 20°, the ALWA also ensures that the person next to the bed is guaranteed not to be disturbed. We wish you a pleasant night's sleep.

ALWA I

- modern design
- flexible application possibilities due to rotatable luminaire body
- ideal as bed and reading lamp
- aluminium
- dimensions L x Ø: 110 x 30 mm
- socket L x W x H: 135 x 50 x 28 mm

ADHARA

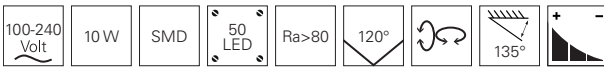

Classic design interpreted in a modern way – the ADHARA made of aluminium impresses with its classic lines, state-of-the-art materials and high flexibility. Thanks to the three joints, ADHARA can be optimally adjusted to any situation. Its powerful LED module delivers 640/800 lumens and can also be dimmed thanks to the touch sensor. Whether in an executive's office or at a child's desk, ADHARA cuts a fine figure everywhere.

ADHARA SMALL

ASTEROPE

Light & shadow: Hardly any luminaire embodies this dualism more beautifully than the ASTEROPE in its various versions. The downward-opening pendant luminaire creates a multifaceted play of light and shadow on walls and ceilings that blends extravagantly yet harmoniously into any ambience.

Our tip: Combine the ASTEROPE with a gold-coloured or milky light source from the Filament series.

TWISTER

Elegant design with innovative details meets unusual choice of materials: The TWISTER series combines decorative floor, table and pendant luminaires in different sizes, made entirely of plaster. We turn the cable into a design element! Completely in classic white, the luminaires are only interrupted by a red cable. This makes the TWISTER series an eye-catcher not only in living areas but also in hotels and restaurants.

showcase lights

HERCULIS

Small helpers, big effect. With HERCULIS display luminaires in high-quality aluminium housings, you can reach all corners of a showcase. The luminaire head with its 40° beam angle can be freely rotated and swivelled in any direction. In addition, the intelligent cable routing and the ready-to-plug-in system allow easy surface and recessed mounting in showcases, counters, sales areas or in the living room.

HERCULIS MAGNETIC

- design optimised for cabinets and showcases
- high performance despite compact design
- ready-to-plug-in system
- flexible mounting thanks to magnets

- aluminium diecast
- dimensions L x Ø: 42 x 31 mm
- socket H x Ø: 5 x 31 mm

MIRAM

Combine & shine – with the MIRAM series, there are no more limits to your creativity. Simply combine the luminaire head in your favourite colour with a stand, a wall bracket or a pendant fixture of your choice. In this way, you can create your very own individual luminaire in the twinkling of an eye and recombine it at any time without tools. Flexible, simple, chic - that is MIRAM combine & shine.

It's that simple:

- Choose a luminaire head in your favourite colour
- Select the desired fastening in your favourite colour

Your advantages:

- USB-C cable included
- 147 possible combinations

ALGIEBA

The smart table lamp with that certain something! Our battery lamp ALGIEBA not only impresses with its design and robust quality. It also offers that certain something for balmy summer nights outdoors thanks to an inductive charging panel that can be switched on via a touch switch!

No more battery problems or tangled cables. Even while charging your smartphone, the light performance does not suffer in the slightest.

The charging option of the included USB-C charging base completes the sophisticated concept of this unique battery light.

ALGIEBA

- high battery life [>10h]
if charging panel is not used
- easy charging via charging station with USB cable
- >200lm

SHERATAN

The SHERATAN is a battery-operated LED table lamp that can be charged via an integrated USB connection. This makes the SHERATAN suitable not only for use as accent light in living rooms, but also at events such as galas, corporate events and garden parties. The 38 cm high housing with wavy or smooth lampshade and stable base plate made of robust die-cast aluminium [IP54] houses a 2.2 watt LED bulb that produces a pleasant warm white light with 3000 K and can be switched on and off via a touch sensor.

LACERTAE USB

Be outside, have fun and simply take the light with you. No problem with this faithful companion. Thanks to its 3-stage dimming function, the LACERTAE USB is a favourite for cosy reading by the lake or a romantic picnic in the park. With the integrated power bank, it not only supports your garden party with light, but also ensures that the music doesn't run out of steam. The LACERTAE USB – a must-have for all those who want to be free.

SAMAS SOLAR

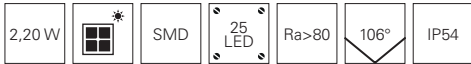

Not everywhere you want light, there is also electricity. We have the solution. The SAMAS SOLAR series only needs one thing to shine; sunshine every now and then. Thanks to its intelligent economy mode, in which it shines with only 15% light output when not in use, it has a particularly long burning time. As soon as it detects approach via its integrated sensor, it shines with full power. It can also be deactivated via a push-button. The powerful light output combined with the latest technology for long operating times is a real problem solver for walls, tables and gardens.

HYDRAE

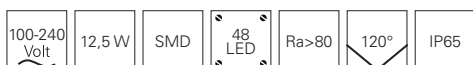

With the HYDRAE LED bollard luminaire, various outdoor scenarios can be elegantly and efficiently illuminated. Developed for outdoor use, the designer luminaire made of combined die-cast aluminium and stainless steel is suitable for path lighting or as a decorative lighting element in the garden area. In addition to the bollard luminaire version, the HYDRAE product family also includes a wall-mounted luminaire.

BERMUDA

Admittedly, a big name for a small luminaire. But in its design, the BERMUDA series undoubtedly presents itself as exciting as the well-known triangle. The small light dwarf is an enrichment for every garden and fits like a small mushroom into every outdoor environment. And by the way, it also cuts a fine figure as a wall luminaire.

MARKAB

Timeless and luminous – the MARKAB is a thoroughly modern wall-mounted luminaire for outdoor use in private and commercial areas. Whether on house walls, boundary walls or in parks – thanks to its sophisticated housing design, the MARKAB emits its powerful 620 lumens to its surroundings with absolutely no glare. With a wide beam angle of 304°, the discreet outdoor luminaire not only illuminates its immediate surroundings. Thanks to the robust diecast aluminium housing and the IP65 certification, you will enjoy the MARKAB for a long time.

GRUMIUM

Modular, compact, with great effect – the GRUMIUM surface-mounted wall luminaire can be installed on terraces, on house walls or in the entrance area of living environments and is a flexible universal solution for many areas of application thanks to its optional covers with different designs. The permanently installed and energy-saving LEDs with a maximum of 10 watts are surrounded by a diffuser made of milky plastic and produce a pleasant warm white light with a luminous flux of 730lm. The Grumium outdoor luminaire with its die-cast aluminium housing is available in angular and rounded versions and has an IP54 protection rating.

LYNCIS

The LYNCS LED wall-mounted luminaire not only impresses with its sophisticated and filigree design [winner of the Red Dot Design Award 2017], but also with its outdoor properties. The compact IP65-certified outdoor luminaire sits in a dark grey die-cast aluminium housing and with its 96 LEDs produces a 10-watt, warm white light [500 lm] that integrates seamlessly into a wide range of outdoor applications.

ARCTURUS

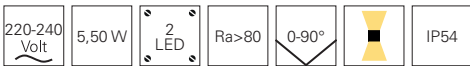

The ARCTURUS LED wall-mounted luminaire presents itself in a modern cube design [also available in an elongated form] and is suitable for flexible lighting in outdoor areas. The beam angle of the IP54 luminaire can be adjusted between 0° and 90° via an integrated shutter to generate a different light pattern depending on the application requirements. Protected in the dark grey die-cast aluminium housing are the two high-power LEDs that produce a warm white, 5.5 W light.

JABBAH

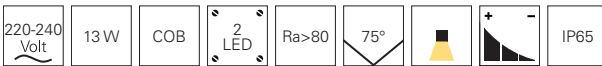

The square JABBAH uses integrated COB LEDs in warm white and emits its light asymmetrically at 75° in a cone shape onto walls - in the simple version with 915 lumens, as UP AND DOWN version with a total of 1850 lumens. In addition, the double-sided JABBAH can be dimmed to 60% light output via a dip switch if a more discreet light output is desired.

JABBAH

- modern design
- dimmable to 60% via DIP switch
- high luminous intensity
- aluminium diecast
- dimensions L x W x H: 150 x 150 x 150 mm

ALKES

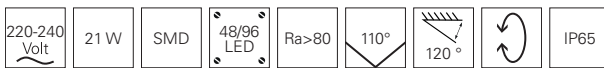

The ALKES series is not a classic wall-mounted luminaire, but with its SMD LED panel is reminiscent of a floodlight. The highlight: the upper part of the housing is tilted forward by 45° from the façade to direct the warm white light specifically onto the surface to be illuminated. In addition, the ALKES with its modern design and rounded edges cuts a great figure even when switched off.

ALKES

- modern design
- sophisticated effect lighting
- can also be used indoors
- aluminium diecast

BERMUDA

Admittedly, a big name for a small luminaire. But in its design, the BERMUDA series is undoubtedly just as exciting as the well-known triangle. The small light dwarf is an enrichment for every garden and fits like a small mushroom into every outdoor environment. And by the way, it also cuts a fine figure as a wall luminaire.

surface-mounted / ground spike lights

BERMUDA

Admittedly, a big name for a small luminaire. But in its design, the BERMUDA series is undoubtedly just as exciting as the well-known triangle. The small light dwarf as an enrichment for every garden and fits like a small mushroom into every outdoor environment. And by the way, it also cuts a fine figure as a wall luminaire.

BERMUDA

- Design by Johannes Tomm
- eye-catching outdoor lighting
- easy mounting
- 360° beam angle
- aluminium diecast
- dimensions H x Ø: 563 x 200 mm
- dimmable via leading or trailing edge
- ready to plug in with IP44 safety plug

CAPH

Despite the linear design, the CAPH wallwasher range is a "round thing". The wallwashers offer a variety of possibilities to accentuate different objects. Be it the rustic stone wall in warm 3000 K or the modern new building in RGBW. The different optics with symmetrical or asymmetrical beam angles help with positioning.

With the 230 Volt versions, no further accessories are needed. Thanks to the 24 V versions, the CAPH wallwashers can be integrated into all control variants on the market - a »round thing«.

CONTEMPORARY LIGHTING SOLUTIONS FOR A MODERN WORKING WORLD

For a long time, the requirements for commercially used luminaires - also known as industrial luminaires – were straightforward: they had to be bright, reliable and low-maintenance, while complying with current directives and standards. These core factors remain unchanged today [even more so with regard to energy efficiency]. But apart from these purely functional properties, modern companies – whether in production halls and warehouses, in offices or in administrative and educational facilities – expect much more from a commercial luminaire today. Of course, commercial lights must first and foremost comply with

clearly defined guidelines and standards, for example to ensure safety at the workplace or in public spaces. At the same time, new lighting technologies and findings from various scientific disciplines have greatly expanded the demands placed on commercial luminaires. HCL [Human Centric Lighting] and the absence of glare according to UGR are only two keywords that contribute to the quality of modern lighting solutions. In addition, the aesthetic component also plays an important role: thanks to the triumphant advance of LEDs, manufacturers today have far more scope for design in the development of technical luminaires.

Foto: Daniel Vießer - Architektur fotografie, Karlsruhe

DAS PERFEKTE ARBEITSLICHT...

...depends on various factors and changes depending on the requirements, room and time of day. Basically a commercial luminaire must support the work processes of people whether assembling a car or working on a computer at an working at a computer at an office desk. The same applies for kindergartens, schools and universities – here too the light must support long periods of concentration, without being perceived as a disturbing element. To achieve this, there are various values and key figures, values and indicators, some of which have only come into being thanks to new in the lighting sector. In the following we would like to present some of them to you.

UGR VALUE

The smaller the UGR value, the more glare-free a luminaire emits its light. Especially in office areas, you should use luminaires with a UGR value of less than 19 in order to avoid disturbing reflections. When determining the UGR value of a complete room, additional factors such as wall colour[s] and surface finishes play a role.

COLOUR RENDERING INDEX RA

The colour rendering index Ra describes the measure of the correspondence of the perceived light colour between an existing lighting situation and a reference light source. The smaller the deviation, the better the colour rendering. A light source with Ra 100 reproduces all colours exactly. The lower the Ra value, the less precisely the colours are reproduced.

HCL

HCL stands for "Human Centric Lighting" and means the simulation of lighting situations according to the biological day-night rhythm of humans. HCL matches artificial light indoors to natural daylight and promotes well-being, mood and health. Numerous DEKO-LIGHT luminaires can already be integrated into an HCL control system to adjust the light colours to the biorhythm. In addition, several LED stripes in different light colours can also be combined in one profile and thus integrated into the HCL lighting design.

Foto: Daniel Wieser - Architekturfotografie, Karlsruhe

IK VALUE

Compared to the previous values and key figures, the IK value does not describe the quality of light itself, but indicates how shock- and impact-resistant a luminaire or certain components are. IK00 offers no protection against external mechanical stress, IK 10 or IK10+ means that the luminaire can withstand a 5 or 10 kg test weight from 40 or 50 cm. In addition to the IP protection class, the IK value of a luminaire is increasingly required in tenders and for installation in public spaces.

ACRUX

All luminaires in the ACRUX series have a special feature; the light temperature [3000, 4000, 6000 K] can be set before installation with the switch on the back. This allows a lot of flexibility in the planning phase. The luminous intensity can be individually regulated by phase angle control. The cover supplied can be easily removed if necessary so that the luminaire can also be installed in its housing colour [white]. The integrated diffuser reduces glare and creates a pleasant lighting situation.

ZAURAK

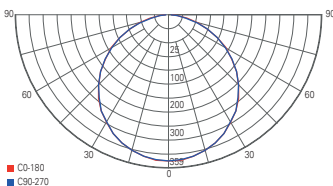

Recessed ceiling luminaires can be discreetly integrated into private and commercial spaces, but when they need to be replaced, the existing ceiling cut-out can become a problem. The ZAURAK series comes with an adjustable mounting bracket that allows larger or smaller ceiling cut-outs to be used. In addition, the ZAURAK has a low installation depth for universal use. The scope of delivery includes two interchangeable cover rings in silver and black.

ZAURAK 180

- light colour and output adjustable via dip switch [CCT / W DIP]

MODULAR SYSTEM COB

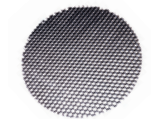

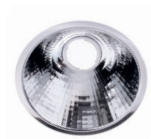

The MODULAR family of recessed ceiling luminaires offers a wide range of applications. Whether almost invisible or with a present frame – these modules are as flexible as you want them to be. By exchanging the reflectors, different light cones can be created and by using filters / diffusers, you can individually select or retrofit your lighting mood. We offer the LED modules in warm and neutral white. This gives you the option of adapting the individual elements to local requirements in order to create your perfect lighting situation.

LED PANEL

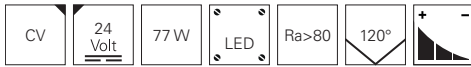

The multifunctional office panels are real all-rounders. In combination with modern control systems, the possibilities go far beyond UGR-compliant illumination of office areas. Automatically adjust the light colour to the time of day with the CCT panel [HCL] or benefit from the RGB+W variant for atmospheric after-work lighting.

ALTAIS

It takes a lot to bring the Altai series into embarrassment. Thanks to IP54 and impact resistance class IK10, the outdoor luminaires are convincing as slim all-rounders in both public and private areas. The Altai luminaires offer additional flexibility thanks to their integrated motion sensor [programmable via the remote control supplied] and the adjustable light colour for different lighting scenarios.

OFFICE THREE DALI 2.0

The pendant luminaire is a matching addition to the OFFICE THREE MOTION floor lamp. As the glare value is less than 10, this technically sophisticated luminaire can almost be described as completely glare-free. The upward-facing LEDs create ambient light, while the downward-facing LEDs shine clearly defined and powerful light onto the work area.

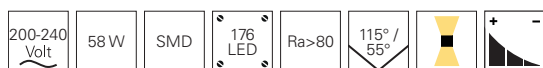

OFFICE THREE DALI 2.0

DRACONIS

The modular DRACONIS series enables flexible ceiling lighting for a wide range of applications. Combine the luminaire head with our mounting adapters for optional use as a fixed surface-mounted ceiling luminaire, in a 3-phase track system or as a suspended luminaire and flexibly adjust the output and light colour. In addition, we offer several lenses for asymmetric and symmetric illumination in multiple beam angles to use the DRACONIS in almost any scenario.

DRACONIS

- light colour and output adjustable via CCT dip switch
- high luminous intensity [bis 8200 lm]
- aluminium diecast
- dimensions L x W x H: 578 x 189 x 71 mm
- socket L x W x H: 500 x 40 x 23 mm

ALUDRA

Whether in high-bay warehouses, large sales areas or spacious presentation areas – the pendant luminaires of the ALUDRA series present themselves as universal high-bay luminaires for use at great heights. Thanks to their high luminous intensity, wide beam angle and IK10 impact resistance class, the ALUDRA luminaires provide functional lighting for large areas safely and reliably.

damp-proof luminaires

With the kind support of WIBU-SYSTEMS AG Karlsruhe

TRI PROOF SLIM

Waterproof, impact-resistant and versatile – the surface-mounted ceiling luminaires of the TRI PROOF SLIM series are flexible workhorses with an innovative design. Whether in wet areas, cellars, workshops, garages or warehouses – the IP68-certified SLIMS are impact-resistant up to IK10 and their beam angle can be continuously adjusted.

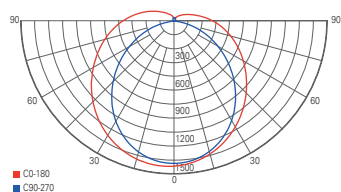

TRI PROOF SLIM

- plastic
- dimension Ø: 39 mm
- infinitely adjustable beam angle
- easy installation in existing mountings [e.g. pipe clamps]
- easy connection due to quick connection terminals
- simple through-wiring
- incl. 4x screws, 4x dowels, 2x bracket clip, 2x quick connection clip, 1x cable connection cap

TRI PROOF

Equipped with LEDs in neutral white light colour [4000 K], the TRIPROOF LED IP65 moisture-proof luminaire consists of a light grey polycarbonate housing and a satinised polycarbonate cover in one piece. It is suitable for simple ceiling, wall or pendant mounting and is available in three different lengths.

Several can be strung together; ideal for industrial and private use, e.g. for lighting under canopies, in basements, workshops, garages, industrial halls, etc. The luminaire is provided with a simple electrical connection with plug-in terminal.

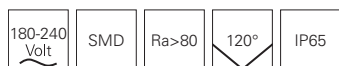

TRI PROOF

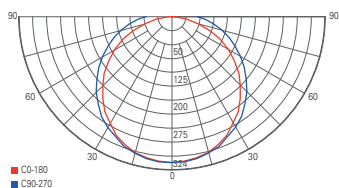

- plastic
- dimensions W x H: 61 x 56 mm
- stackable up to 25 / 15 / 10 pieces
- incl. 3 mountings clips

effect lights

MAIA

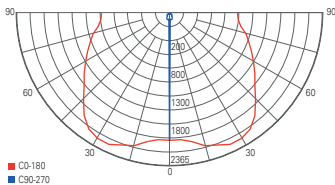

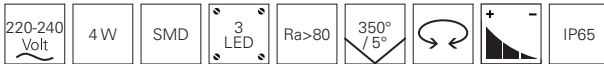

Futuristic lines on walls and ceilings – the effect luminaires of the MAIA series based on SMD LEDs produce a warm white line light. Both models set visual accents and emphasise the surrounding architecture. Thanks to its slim and elegant shape, the IP65-certified MAIA series can be flexibly integrated not only in outdoor areas but also in indoor areas.

Unlike other systems, you will not need any additional or special electrical components such as feeders, connectors, corners or T-connectors for the recessed tracks in the future. All standard components of the system are used and only the matching plastic cover is exchanged, and the recessed version is ready. This simplifies stock-keeping and gives significantly more flexibility here as well.

PLANNING GUIDE D LINE TRACK SYSTEM 3-PHASE 230V

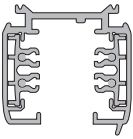

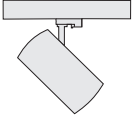

D LINE POWER RAIL SYSTEM 3-PHASE 230V

The new D LINE track system is available exclusively from DEKO-LIGHT and is extremely easy to plan and install thanks to its components, some of which have been completely redesigned. It is also compatible with all common track adapters and luminaires. The elegant and timeless design is available in white, black and grey, and the wide range

of accessories and mounting components means that there are no limits to its use and installation. Thanks to the new interchangeable mechanism of the 90° and T connectors, planning is easier than ever before and the installation of even complex shapes will be child's play in the future.

710071	<input type="checkbox"/>	Traffic white RAL 9016	L: 3000 mm	118,95 €

On request, all D LINE busbars can be supplied ready-made and cut to size according to your specifications for a small surcharge. This allows you to start installation directly on site at the customer's premises. Please contact our sales department for more information.

With the surface-mounted adapter, every 3-phase track luminaire can be converted into a surface-mounted spotlight. This is often desired when ceiling spots scattered around the room are to match the design of the track spotlights.

If, for example, more complex track installations are to be visually connected to one piece, but several different power supplies/controls are used, the mechanical connector is ideal. Visually, the track appears to be in one piece, electrically the two sections are separated from each other.

accessories for built in system

710093	cover plate built in track T-joint	2,95 €
---------------	------------------------------------	---------------

Almost identically to the corner connector, the direction [left/right] of the T-connector can also be changed by removing the cover. Due to the design, however, there are two T-connectors in each colour variant, as it may be that either left/left/right or right/right/left is required depending on the

alignment. But also with this article, the variants could be reduced by half. This also means here: significantly simplified planning and assembly.

D LINE QUICK MOUNTING CLAMP FOR TRADE FAIR CONSTRUCTION

- aluminium
- dimensions L x W x H: 40 x 30 x 11,90 mm
- suitable for mounting system

710082 ■ Graphite black RAL 9011

9,95 €

Especially in trade fair construction, where busbars are frequently mounted and dismantled, the quick mounting clamp is the perfect mounting aid. The conductor rail is clicked into place with the spring clip and fixed in place without tools by means of a knurled screw. Conductor rail installation has never been faster.

D LINE TRUSS ADAPTER

- aluminium
- dimensions L x W x H: 40 x 30 x 11,90 mm
- suitable for mounting system

710083 □ silver coloured

24,95 €

Thanks to the quick-release fasteners of the truss adapter, the D LINE busbars can be mounted in seconds on the trusses with 50 mm tube diameters commonly used in event technology and exhibition stand construction.

This little "jack-of-all-trades" makes mounting a track on an existing grid ceiling child's play. The installation time is only a fraction of what it used to be. In the first step, the clip is simply clicked into the visible metal strips of the grid ceiling and is held bomb-proof on the ceiling by means of a safety spring clip. After that, the conductor rail is simply pushed onto it and the installation is finished.

LINEAR LIGHT IN 5 STEPS

STEP BY STEP TO BECOMING A LINEAR LIGHT PROFESSIONAL!

It has never been quicker and easier to put together an individually and perfectly coordinated linear light in max. 5 steps. Test how quickly and easily you can put your personal project into practice.

1

CHOOSE YOUR PROFILE

Whether for indoor or outdoor use, for wide or narrow LED stripes, whether the profile is to be should be low or high. Matching to this you can choose between different shapes and light transmittance of the covers.

2

CHOOSE THE RIGHT LED STRIPE

You can choose between strips for indoor or outdoor use, with one or more light colours, high-power strips for basic lighting or fewer lumens for ambient lighting. Various cut sizes and LED spacing also perfectly round off our range here.

3

SELECT THE REQUIRED POWER SUPPLY

In addition to the various protection classes for the respective place of use and voltages, you can choose from different designs and power classes. Our range is complemented by power supplies that can be dimmed directly or controlled via Dali, KNX or 1-10V. Please also refer to our »Small 1x1 of power supply and control of LED stripes« from page 808.

4

DO YOU NEED A CONTROLLER TO STEER?

In this category, you can select the appropriate control controller or LED dimmer according to requirements and customer wishes. Whether control via radio, smartphone, DMX, Dali, etc. – almost no [control] wishes remain unfulfilled!

5

ACCESSORIES, MOUNTING MATERIAL & CO

In the last step, you will find everything that makes installation easier, faster and more comfortable and gives the linear desired light a perfect finish.

LINEAR LIGHT – FROM PLANNING TO THE FINISHED PROJECT

The right solution for every application – private and commercial

Light has several functions in the home. First and foremost, it serves to illuminate small and large small and large surfaces - from the dining table to the kitchen countertop in the kitchen to a cosy reading corner. On a less functional level, however, light primarily creates ambience, mood and the much quoted »feel-good factor«. This is where LED technology shows its strengths to the full and enables colour and intensity changes at the touch of a button – manually switched or programmed in the Smart Home.

Particularly in vogue – both with private individuals and with lighting designers and architects – is the so-called linear light. Linear light is indirect light in the form of LED stripes that are protected in precisely fitting aluminium profiles. These can be installed in a variety of ways on walls, ceilings, stairs or on furniture. There are hardly any limits to your own creativity. Use linear light to accentuate architectural elements and arouse emotions through the versatile interplay of light and shadow.

With the kind support of Friese Elektrotechnik, Eitenheim

With the kind support of BEST Belle and Elektro Service Team GmbH, Rauenberg-Malschenberg

MORE THAN JUST ACCENTS

However, linear light has much more to offer and is increasingly playing a central role in main lighting. Lighting designers are increasingly foregoing the use of classic luminaires and recessed spotlights in favour of a linear lighting solution. In combination with special LED stripes provide homogeneous light lines for effective lighting. Through the use of the use of linear light emphasises the basic shape of a building or piece of furniture without disturbing the design language and without itself becoming too obvious in the foreground. In contrast to classic lighting solutions, the view into the room remains unobstructed.

With the kind support of Friese Elektrotechnik, Ettenheim

NOT ALL WHITE IS THE SAME

As with conventional LED luminaires, there are also variants of LED stripes with fixed or variable white temperatures. Not all white is the same! The decisive factor is the colour temperature, which ranges from a bright, cold working light to warm mood and accent lighting. A basic distinction is made between warm white, neutral white and cool white. Warm white light, for example, is suitable for the living room or bedroom, neutral white for bathrooms and kitchens, and cool white for functionally illuminated workrooms. Those who want to remain flexible should look for LED stripes with warm and cool white LEDs so that the colour temperature can be individually adjusted via a controller. For this purpose, LED stripes are available in different versions: 1-channel stripes can only display one colour, 2-channel stripes enable switching between different shades of white.

With the kind support of Friese Elektrotechnik, Ettenheim

In addition to the actual stripe light and the respective profile to cover the stripe, an additional power supply unit and a controller are required for installation - with or without the option of dimming the LEDs, depending on the requirements and design of the LED strip. In the chapter on power supplies, you will find an overview of the different versions. When fully equipped, LED stripes thus offer flexible control over lighting and room moods - from changing light colours to adjusting the light intensity according to the time of day. Whereas for 1-channel stripes a simple switch [on/off] is sufficient, multicoloured light stripes can be conveniently controlled from a smartphone using a radio remote control as well as apps.

MADE TO MEASURE

A final tip: DEKO-LIGHT offers a comprehensive assembly service [p. 14] for linear lighting solutions. Plan your projects individually, reduce your installation time, avoid sources of error and use your LED stripes, including the appropriate profiles, in your projects.

ASSEMBLY FOR PROFILES & STRIPES

We provide our products individually made to measure on request.
You will receive the prices on request.

989100 – service package I – profile cut

profile is shortened to desired length, tolerance ± 1 mm | sawing loss 4 mm

989105 – drill hole end cap / profile

hole for cable outlet in end cap or profile

989200 – service package II – cover cut

cover is shortened to desired length, tolerance ± 1 mm | sawing loss 4 mm

989300 – service package III – stripe cut

LED stripe is adapted to desired length, taking into account segment and maximum total length, including soldering of a cable lead of the desired length and open, tinned wire ends

989305 – cable – connecting cable / cores 1 channel

989310 – cable – connecting cable / cores 2 channel

989315 – cable – connecting cable / cores 3 + 4 channel

989320 – cable – mini cable / cores 1 - 4 channel

989325 – cable – connecting cable / cores 5 channel

989301 – 2nd connecting cable

attachment of a 2nd connecting cable / cores for further connection with open tinned wire ends

989302 – connecting cable

attaching / soldering a fixed connection line / cores between 2 stripe pieces

[max. 1m connection line / cores incl., a longer connection will be charged by the metre]

original length and max. total length of the strip to be operated may not be exceeded by sections be exceeded

989350 – IP surcharge – sealing stripe

sealing a shortened IP stripe / gluing an end cap

989400 – service package IV – complete assembly

bringing together and assembling all components into a finished luminaire
incl. function test and cable flag

[for desired length, please add 2cm to the cut length of the LED stripe segment
for connection space, length tolerance ± 2 mm]

CONFIGURATOR – UNRIVALLED FLEXIBILITY

Linear light is the lighting trend of the moment! So that you know exactly which LED strips and profiles are suitable for your project and which dimensions and quantities you need, there is our online configurator. Enter your individual application data and choose from our strips, profiles, covers, end caps and more – the configurator does the rest for you.

available end of 2021

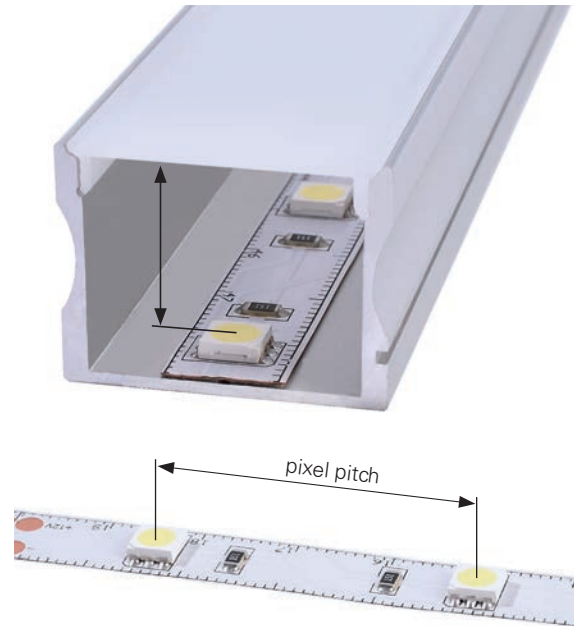

HOMOGENEOUS LIGHT IMAGE

How to achieve a homogeneous light image

In combination with a milky 40% cover and a matching LED stripe, a homogeneous light image can be created. The distance [pixel pitch] between the LEDs and the cover is decisive.

The rule of thumb here is:

The distance between the LEDs should be smaller than the distance between the LEDs and the cover.

PROFILE DESCRIPTION

mounting type: A = mounting
E = built-in

Width of the series [10 profile] / of the matching LED stripe

AU - 01 - 10

basic form

series

TRANSLUCENCY / LIGHT TRANSMISSION

95% clear

75% matt

40% milky

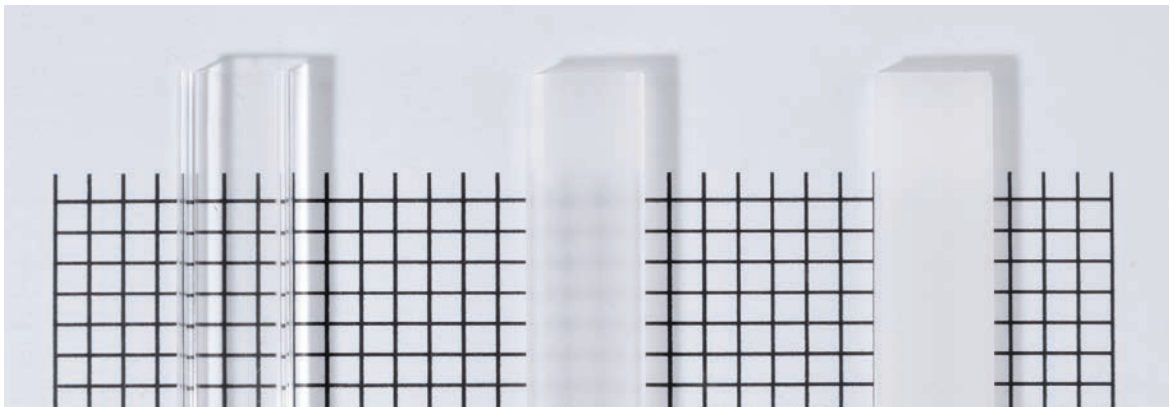

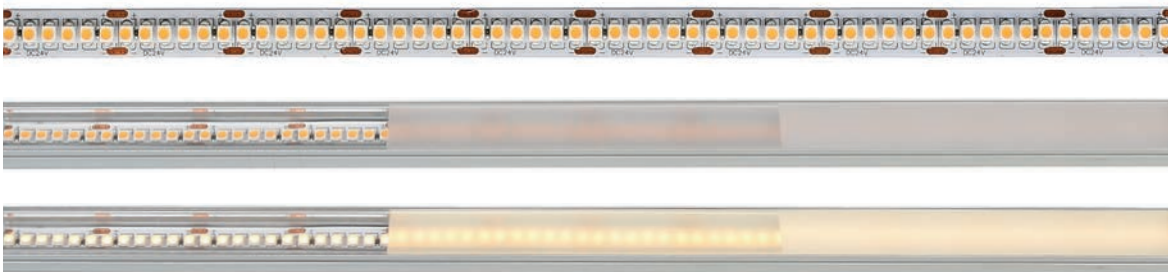

Illustration of various LED stripes with different pixel pitches in combination with three different light transmittances in the covers. This small selection clearly illustrates the optical differences of some LED stripes in combination with different covers.

U- and T-profiles

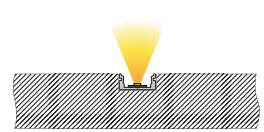

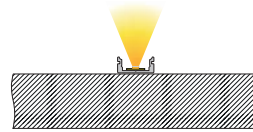

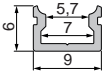

The profiles of these series are available in various designs. Thanks to their universal profile shape, they can be used flexibly in almost all areas. Thanks to their profile construction, they are ideally suited for the cover cut edges.

Attention! Please take into account before assembly:

For an optimal and durable result, please consider the respective climate and weather conditions before installation.

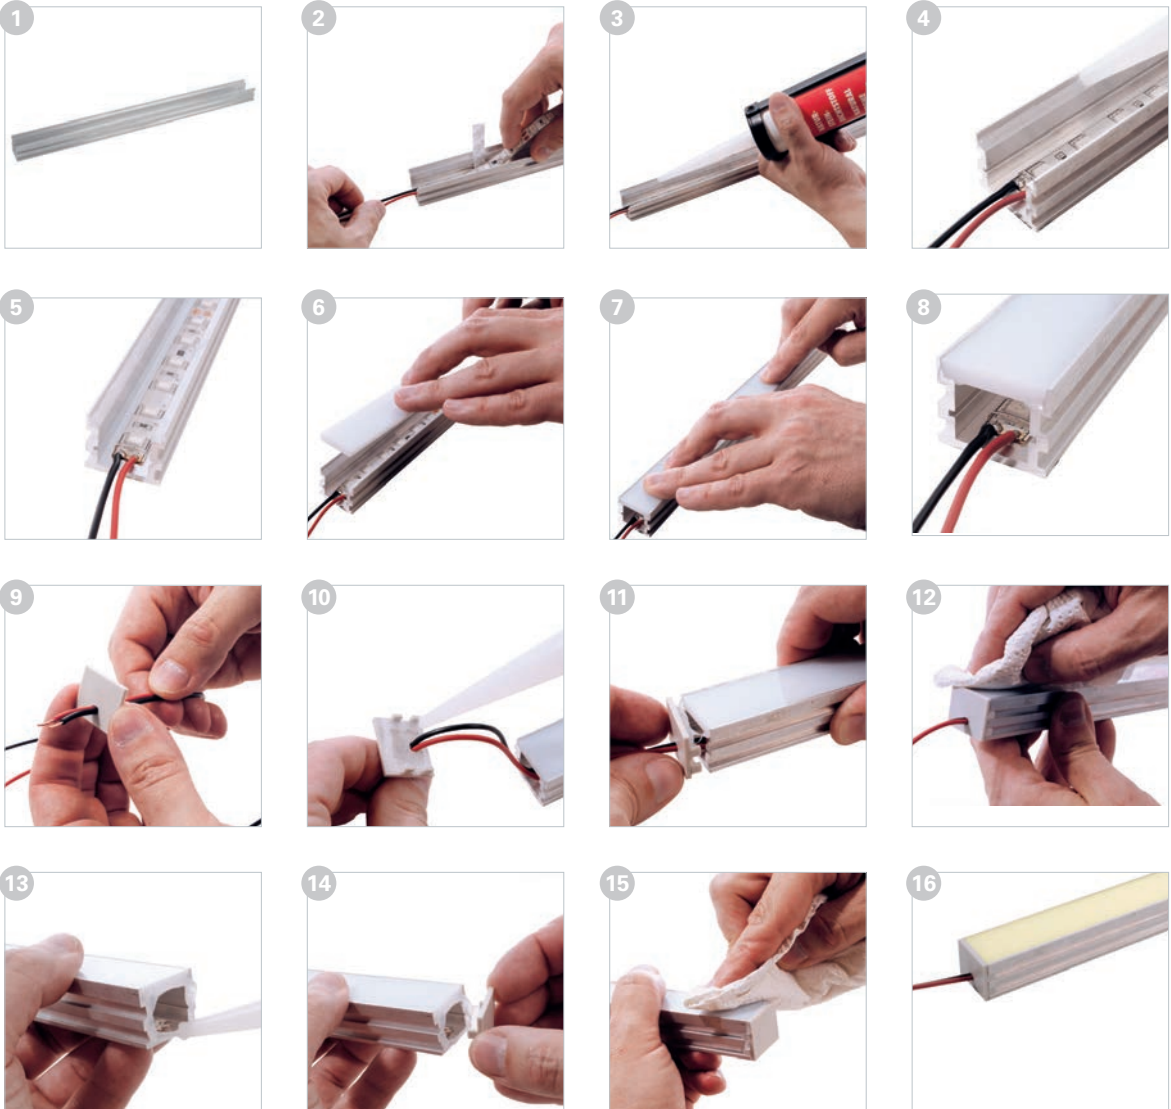

influence of solar radiation:

Please take the sun's path into account before installation. Permanent and intensive sunlight can damage the LED stripe – even when it is switched off. Every material expands and contracts differently. Install the profiles taking into account the temperature fluctuations and the resulting expansion coefficients. Please note that the materials aluminium, PMMA, PC and Makrolon [profiles/covers] can expand to different extents with temperature changes, which can affect the tightness. **This is not a product defect, but a normal physical process.**

influence of water and frost:

Before installation, please take into account that no standing water can form after the profile has been built-in, e.g. in case of rain. In case of improper processing and different temperatures, condensation can form to varying degrees or water can penetrate through capillary action. Standing or penetrating water or moisture can thus impair the tightness in the event of frost and damage the LED stripe. To protect the LED stripe, we recommend half or full watering of the profile [depending on stress and use].

Please note that we cannot accept any liability for further processing or finishing on your part or for tightness, positioning and attachment.

ASSEMBLY INSTRUCTIONS

- 1 for an optimal working base, the profile must be free of grease and dust
- 2 when gluing in the LED stripe, place it on one side and carefully move it vertically press on piece by piece
- 3 after attaching the LED stripe, the cover is glued in place
- 4 continuous, even layer of natural stone sealant/silicone transparent on the entire surface apply the contact surface of the profile
- 5 in order to ensure a continuously closed bonding surface, the sealant must be applied without be applied to free places
- 6 loosen the tapered cover evenly with the narrow side facing downwards insert into the profile
- 7 from one side, press on the cover piece by piece with even vertical movements
- 8 the cover must be flush with the profile at the beginning and end
- 9 lead the connection cables through the end cap [hole in the end cap must be made manually]
- 10 to seal the profile at the end faces, sealant around the end cap and attach in the cable gland
- 11 push the end cap evenly onto the profile
- 12 remove excess material/sealant and clean surface
- 13 repeat the procedure for the second end cap [sealant can be applied to end cap or profile with cover]
- 14 push on the end cap until it is completely in place
- 15 again remove excess material/sealant and clean surface
- 16 after correct and careful processing, a protection class of up to IP65 can be achieved always carry out a function test before further installation

PLAYING HARDBALL

In some applications, even the best profiles are not sufficient to integrate LED stripes safely. There is a solution for these situations as well.

LED stripes are among the most flexible and versatile lighting solutions available and can be used in combination with various, partly specialised LED profiles in almost any application. However, as soon as the highest demands are placed on the durability and resistance of installed LED stripes, for example, through permanent trafficability, special solutions are required.

With the Litus series, we offer such a special solution. The special feature of this complete set is the special hard encapsulation technology of the profile, which we would like to explain to you in more detail below.

HARD GROUTING: 3 ESSENTIAL ADVANTAGES

advantage 1 [over glass]:

Polyurethane hard encapsulation does not splinter

advantage 2 [over plastic covers]:

no problems with subsequent linear expansion [conventional plastics react to thermal effects].

advantage 3:

fully encapsulated profiles do not have any cavities that can fill with moisture and dirt and impair the light image or functionality

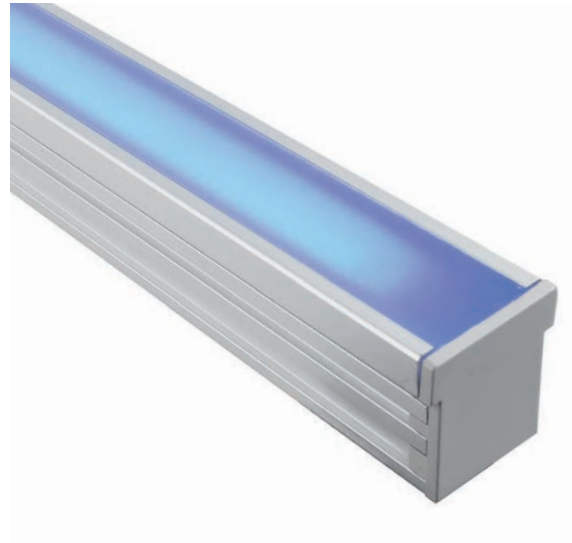

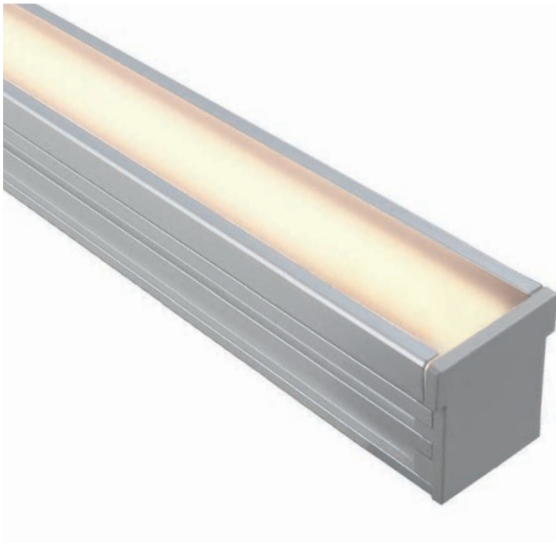

With hard encapsulation, the products are fully encapsulated in a special multi-layer process to protect the LED module all year round from the effects of weather, water penetration and mechanical influences. A particularly long-term stable polyurethane (a plastic or synthetic resin) is used for this purpose. In this way, the integrated LEDs are completely encapsulated to exclude damage caused by moisture. In addition, the hard cast surface is highly robust and ensures a homogeneous light image due to the opacity. A special feature is the integrated cavity, which acts as a pressure relief for the LEDs.

COMPLETE SET LITUS

With the Litus series for outdoor use, DEKO-LIGHT offers a ready-made complete set consisting of aluminium profile, permanently installed LED stripe, cover, end caps and connection cable. Thanks to the chilled casting process, the Litus profiles are suitable for a maximum load of 1 tonne – higher loads can be realised by means of damping with our optional foam support. The profiles can be mounted using either mortar concrete or ceramic adhesive.

The Litus sets are optionally available with two cores [V-, V+] or five cores [R, G, B, W, V+] and are suitable, among other things, for light line marking, civil engineering, accent lighting or for use in exhibition and sales areas.

LITUS LED PROFIL COMPLETE SET | PASSABLE

- Material: aluminium
- connection stripe: 2 leads [V-, V+] | 5 leads [R, G, B, W, V+]
- incl. 2m connection cable with open tinned wire ends

LED stripes

LITTLE 1X1: LED STRIPE POWER ADAPTER AND CONTROL

The planning and selection of electrical components for the commission and control of LED stripes can be a challenge. We explain this complex topic to you.

Why are there so many different options?

Depending on the type of LED stripe installed, they differ not only in terms of photometric values and required supply voltage, but also in terms of electrical connection, control and dimming. These factors often depend on where they are used and the local conditions, which is why the required operating resources - power adapters and control components – differ.

What does primary and secondary dimming mean?

Regardless of the type of luminaire, a distinction is made between primary and secondary dimming. Primary dimming means that the mains voltage [230V AC] applied to the mains unit is dimmed directly via a triac dimmer [rotary dimmer or built-in dimmer]. With secondary dimming, on the other hand, the output voltage of the power adapter is dimmed. In some cases, these so-called »PWM dimmers« are already integrated in the power adapter, in others they are fitted as an additional component behind the power adapter.

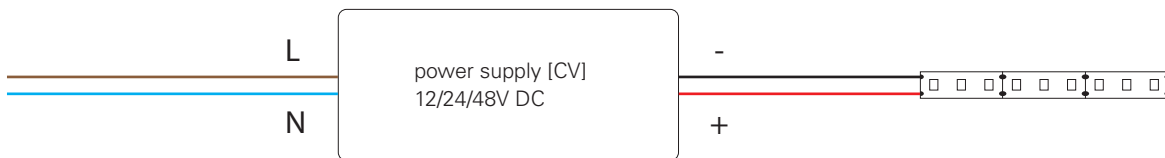

Sounds complicated? In practice, however, it's easier than expected! Since the control of 1-channel and multi-channel stripes is fundamentally different, we treat these two groups separately.

Operation of 1-channel/single stripes [WW, NW, CW]

- a) undimmed
- b) 230V mains voltage, dimmed via phase-cut dimmer [e.g. rotary dimmer]
- c) secondary dimming via radio remote control or app [RF system, Quasar]
- d) secondary dimming via DMX
- e) power supply units with integrated PWM dimmer module, controllable via Dali, 1-10V, KNX

a) 1-channel stripe – undimmed

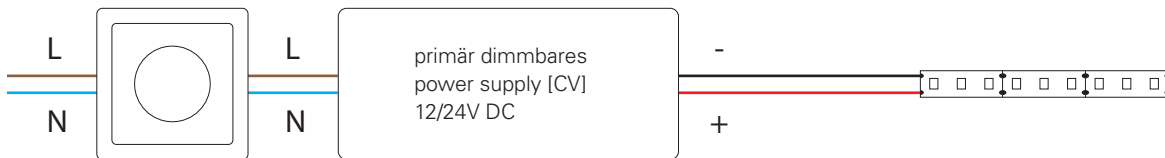

Whenever a 1-channel stripe is used as a basic light or for indirect lighting and is to be operated permanently at full power, it can be connected directly to a suitable power adapter (be sure to observe the output voltage/power!). This operating mode is the simplest way to operate LED stripes.

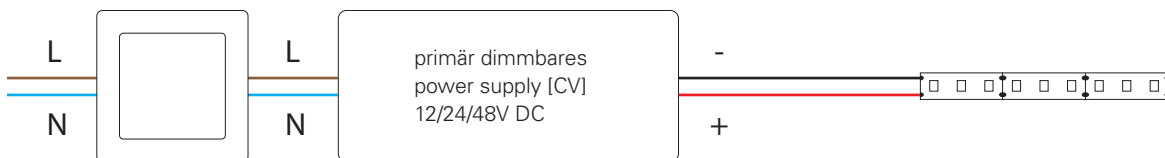

matching power supplies p. 899-902, 905

b) 1-channel stripe – dimmed via primary dimmable mains unit with phase cut-off dimmer

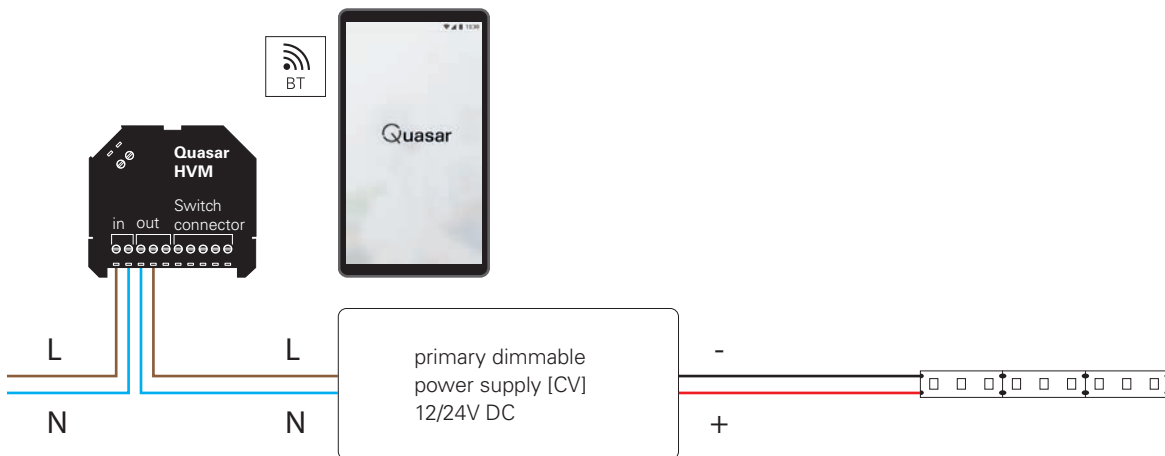

If an LED stripe is to be dimmed, there are various possibilities depending on the required power and the existing wiring network: the simplest option is to dim the mains voltage directly via a triac dimmer, which in turn supplies the mains unit. The best known triac dimmer is the rotary dimmer. However, other triac systems can also be used if they are suitable electronic mains units (C-load). IMPORTANT: Please always pay attention to the rating data of all components and to the fact that only a few mains units are suitable for this type of dimming.

e.g. rotary dimmer [930060] S. 986 matching power supplies p. 904-905

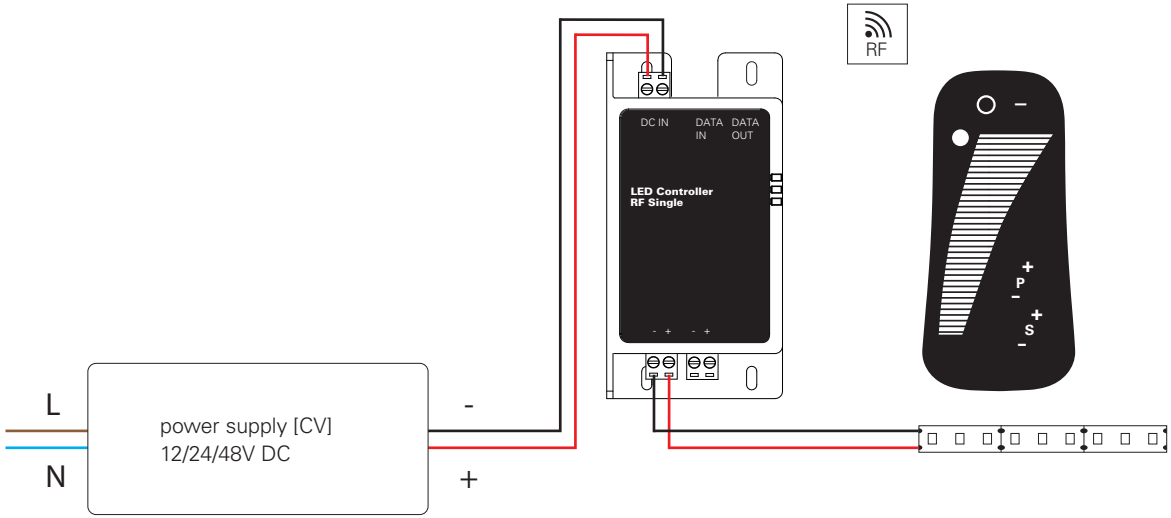

touch dimmer matching power supplies p. 904-905

Quasar HVM [843007] S. 939 matching power supplies p. 904-905

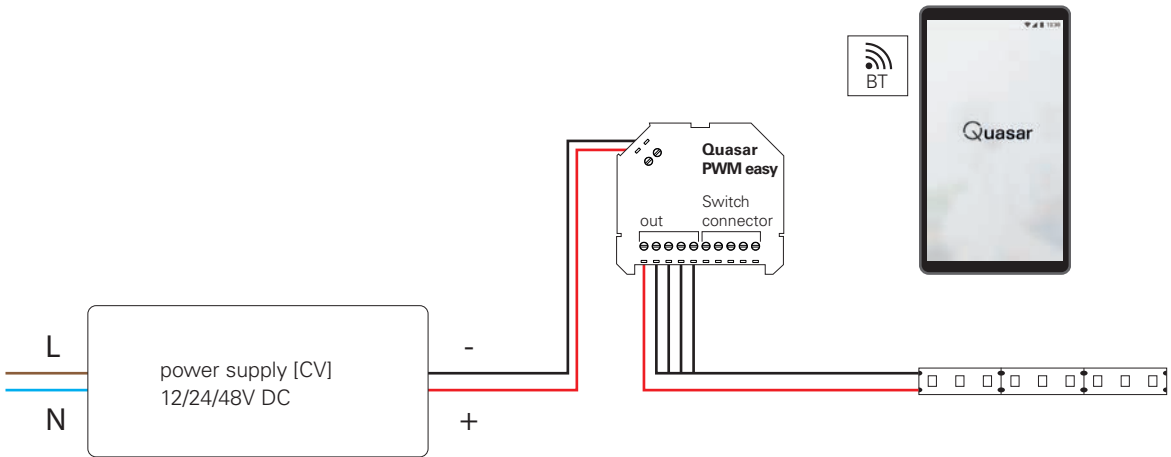

c] 1-channel stripe – secondary dimming e.g. via radio remote control or app

Depending on the customer's performance requirements or operating preferences, other options are often necessary. For secondary dimming, the constant output voltage of the power adapter is dimmed using a downstream PWM dimmer. Different types and designs of PWM dimmers are available, for example radio remote control or smartphone app.

matching power supplies p. 899-902, 905

dimmed via remote control, RF system [843056] S. 946

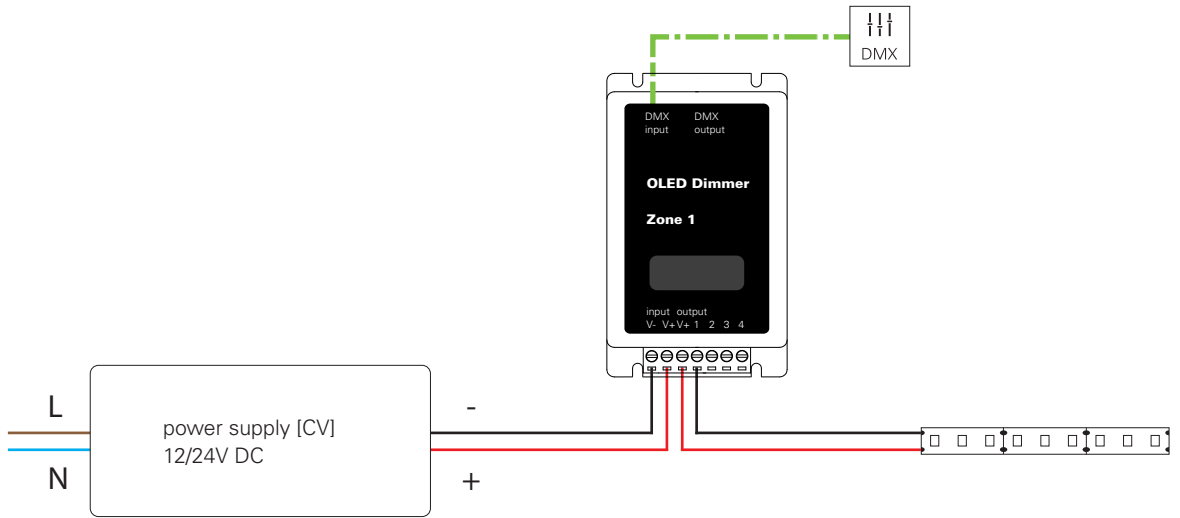

matching power supplies p. 899-902, 905

dimmed via smartphone app and/or additional pushbuttons, Quasar [843053] S. 941

d] 1-channel stripe – secondary dimming via DMX

DMX control is mainly used in theatres, event locations, bars and clubs, but it also offers advantages in other areas of application. Control is via a DMX signal supplied by a corresponding DMX controller. Various types of the latter exist, from a simple wall controller for 1-4 zones to a software solution in combination with a PC interface, allowing even the most complex control setups.

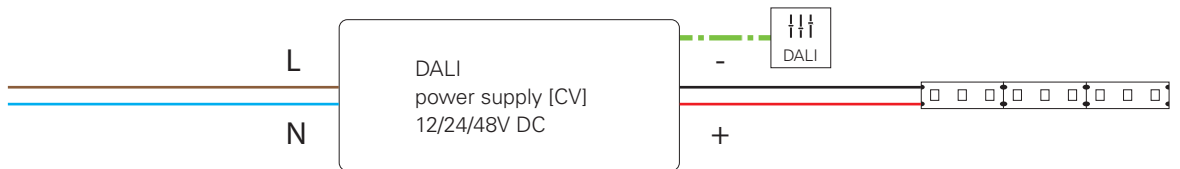

matching power supplies p. 899-902, 905

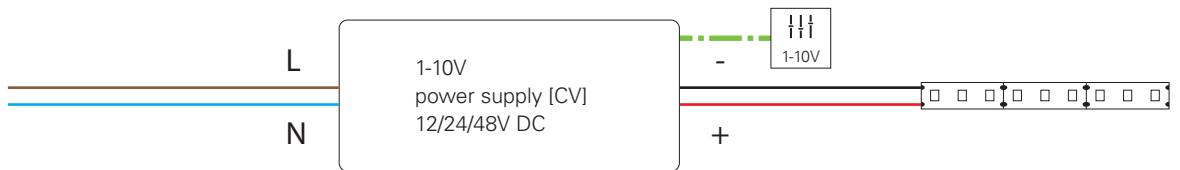

DMX controller from p. 950 | DMX dimmer from p. 951

e] 1-channel stripe on power adapter with integrated PWM dimmer, controllable by Dali, 1-10V, KNX

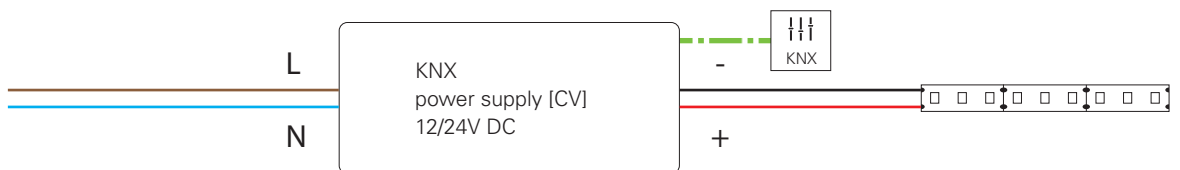

Power supplies with integrated PWM dimmers simplify installation as only one component needs to be fitted and wired. The usual control signals from the building installation and automation can be used. For reasons of compatibility and comfort, I recommend gearing the selection to the building's existing control system as the mains units barely differ visually and in their design. Please note that the different control signals are generally NOT compatible with each other and the corresponding power supply type must be used in each case.

matching power supplies p. 908-909

matching power supplies p. 906-907

matching power supplies p. 910

Operation of multi-channel stripes [2-4 channels / WW-CW, RGB, RGBW]

Multi-channel LED stripes [WW-CW, RGB, RGBW] must be dimmed simultaneously via several channels [two to four]. For example, the colour mixing of an RGB stripe requires that different brightnesses [dimming levels] of the individual colours red, green and blue are mixed together [additive colour mixing]. As a rule, a multi-channel PWM dimmer is connected behind the output voltage of a standard power adapter [without dimming function]. This generates the brightness values of the individual colours via remote control, app, DMX or DALI.

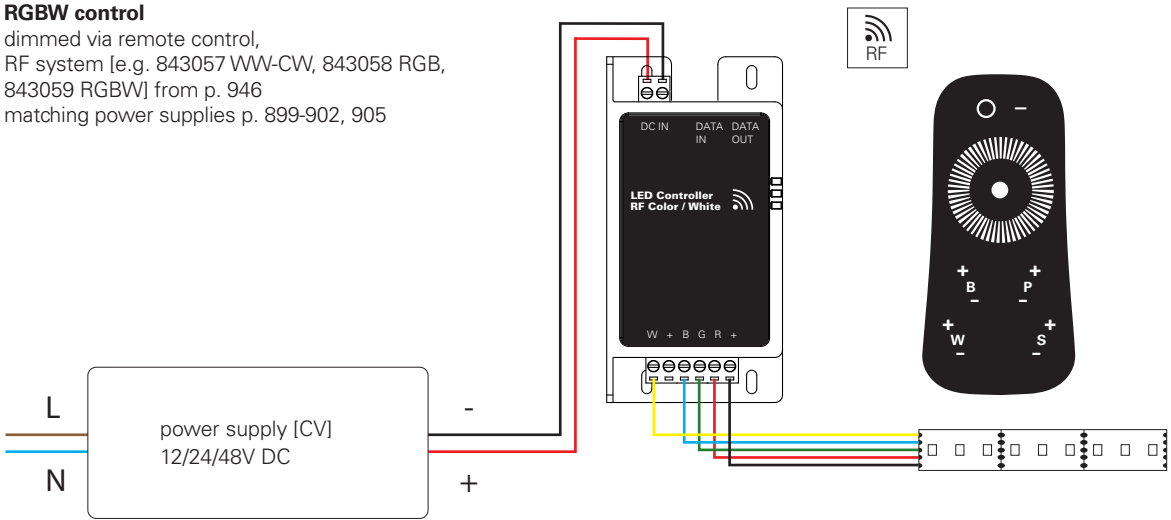

Operation of multi-channel stripes [2-4 channels / WW-CW, RGB, RGBW]

- f) secondary dimming / colour control via radio remote control or app [RF system, Quasar]
- g) secondary dimming / colour control via DMX signal
- h) secondary dimming / colour control via DALI

f] 2-4-channel-stripe – secondary dimming via remote control or app

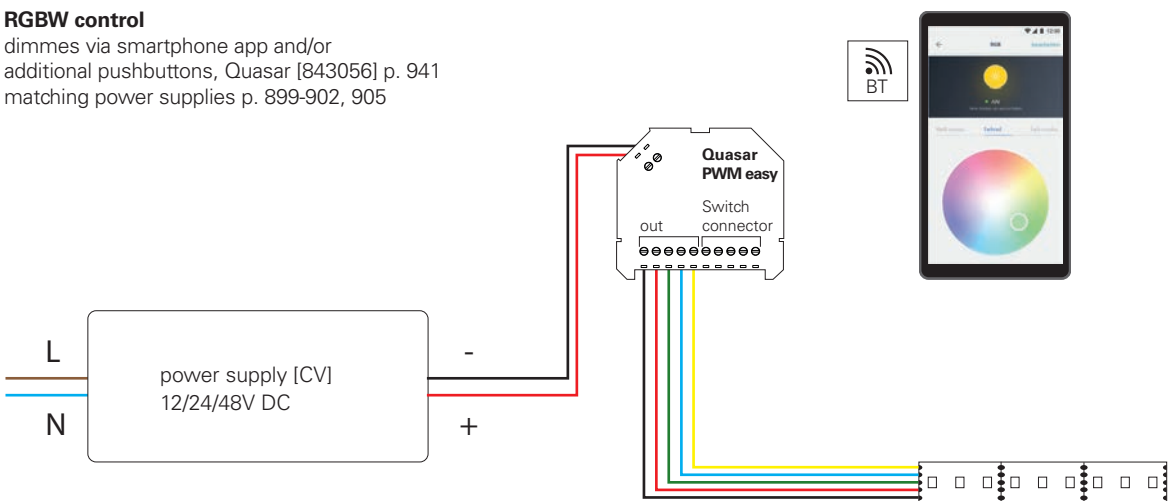

RGBW control

dimmed via remote control,
RF system [e.g. 843057 WW-CW, 843058 RGB,
843059 RGBW] from p. 946
matching power supplies p. 899-902, 905

RGBW control

dimmed via smartphone app and/or
additional pushbuttons, Quasar [843056] p. 941
matching power supplies p. 899-902, 905

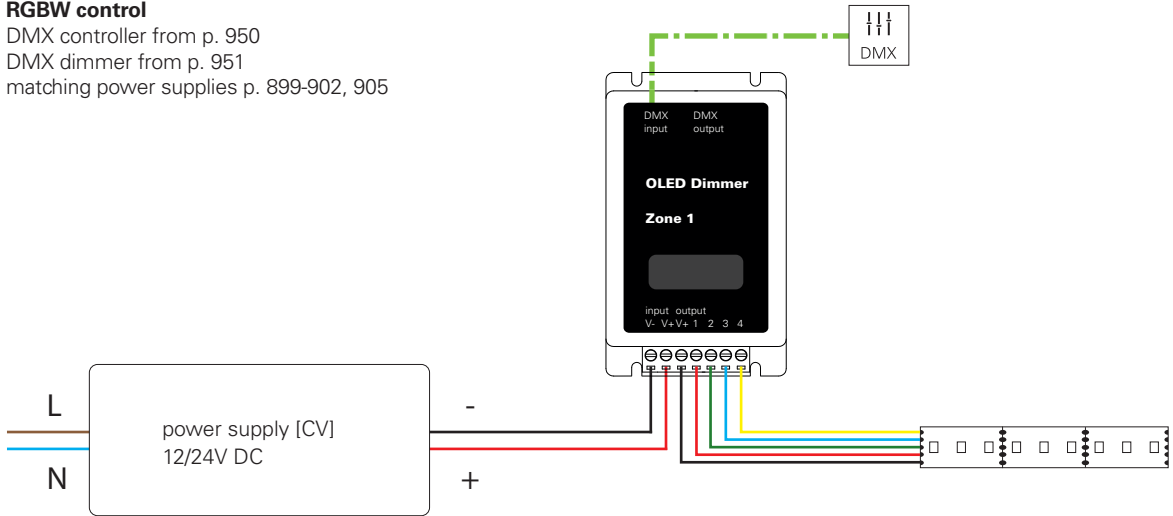

g] 2-4-channel-stripe – secondary dimming via DMX

The control of multi-channel LED stripes by DMX differs only in the use of the multi-channel LED stripe concerned channel DMX PWM dimmer and a suitable DMX controller.

RGBW control

DMX controller from p. 950
 DMX dimmer from p. 951
 matching power supplies p. 899-902, 905

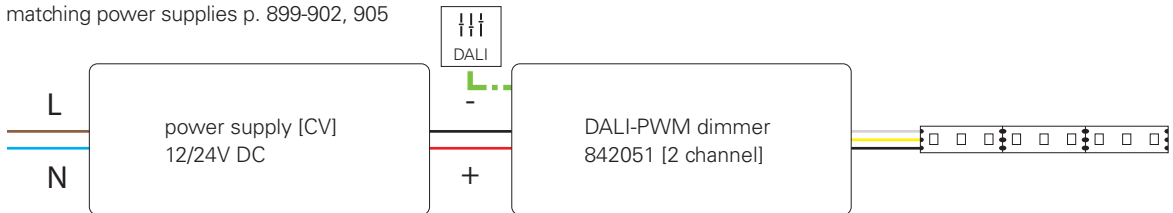

h] 2-4-channel-stripe – secondary dimming via Dali

As with the control of multi-channel stripes by DMX, in the case of control by Dali, a suitable Dali PWM dimmer is connected downstream of the mains unit which receives pre-programmed control commands. As with 1-channel control by Dali, this type is particularly recommended if an existing Dali network is already installed.

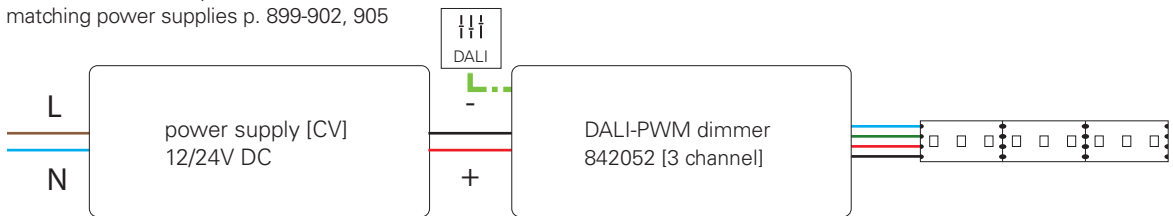

WW/CW control

THINGS TO KNOW ABOUT LED STRIPES

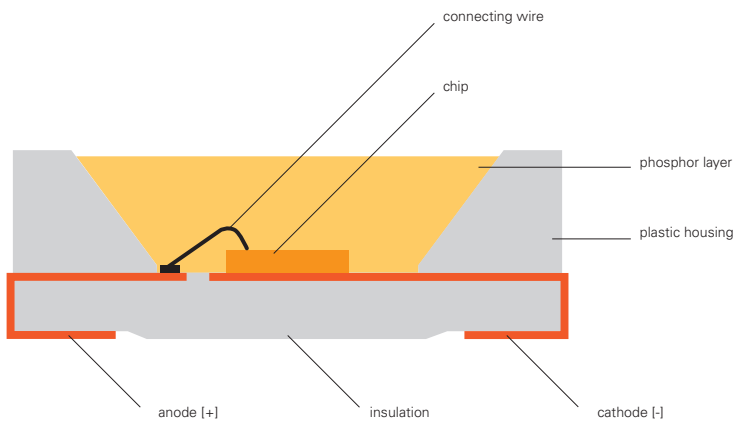

Which LED chips and sizes are most commonly installed in our company?

On these two pages, we focus on LED stripes, or more precisely on the LED chips installed on them. These are installed in a wide variety of sizes, power classes, quantities and distances for a wide variety of stripes in 12V, 24V, 48V and 230V.

quality promise

Our LED stripes are subjected to constant quality control during production. Thus, we can guarantee the high quality of our LED stripes.

STRUCTURE OF A STANDARD LED CHIP

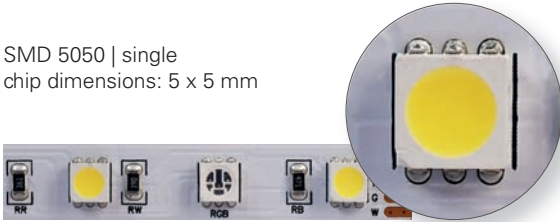

WHAT DO THE NUMBERS MEAN FOR A LED STRIPE?

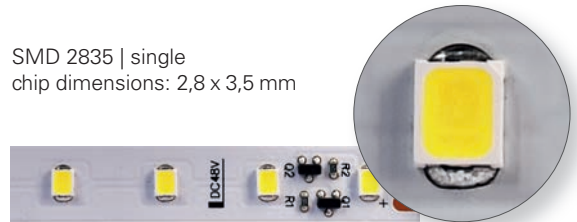

The numbers clearly indicate the size [width and length] and shape of the LED chips installed on a carrier [stripe]. For example, the LED chip 5050 – one of the world's most

frequently used LED chips – has a width of LED chips – each with a length and width of 5 mm. A 2835 LED chip therefore has a width of 2.8 mm and a length of 3.5 mm.

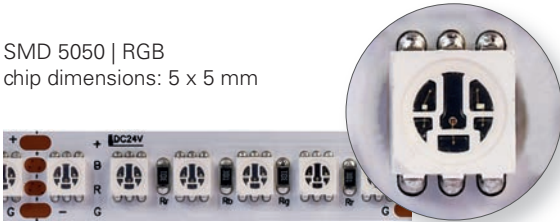

SMD 5050 | single
chip dimensions: 5 x 5 mm

SMD 2835 | single
chip dimensions: 2,8 x 3,5 mm

SMD 5050 | RGB
chip dimensions: 5 x 5 mm

SMD 2835 | WW / CW
chip dimensions: 2,8 x 3,5 mm

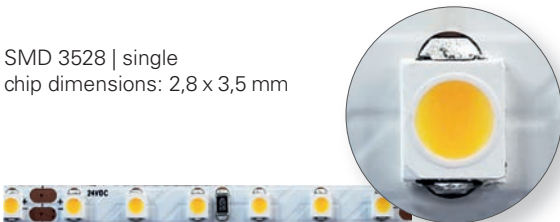

SMD 5050 | WW / CW
chip dimensions: 5 x 5 mm

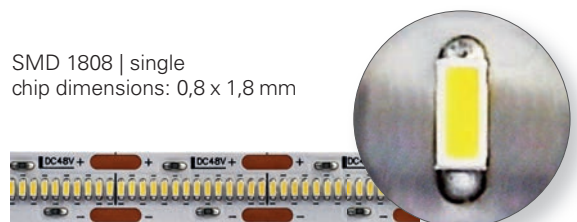

SMD 2216 | single
chip dimensions: 1,6 x 2,2 mm

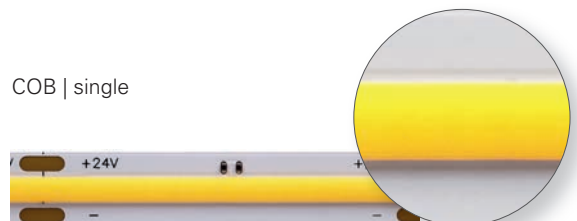

SMD 3528 | single
chip dimensions: 2,8 x 3,5 mm

SMD 1808 | single
chip dimensions: 0,8 x 1,8 mm

COB | single

ASSEMBLY & HANDLING

LED stripes are usually assembled, i.e. shortened to individually required lengths, in order to be able to be installed precisely in the respective project. The stripes must be cut correctly to avoid the failure of individual chips or segments. The following illustrations show the correct handling:

RIGHT: LED stripe is cut at the right place [marked places / copper plates]. With a correctly cut LED stripe, all segments light up completely.

WRONG: LED stripe is not cut at the marked point. The incorrectly cut LED stripe is therefore damaged, causing a complete segment to fail and no longer light up.

MOUNTING & HANDLING

After the LED stripes have been correctly assembled, there are other sources of error that must be avoided during handling and installation. In the following, we show you the four most frequently occurring problems:

LED stripe with torn connection cable and LED chip. This damage can be caused by e.g. twisting, bending, pressing on by objects / friction and force during insertions and feed-throughs.

RIGHT: The LED stripe has been installed taking into account the minimum bending radius. This ensures that the LED stripe is not damaged during installation.

WRONG: The LED stripe was bent due to carelessness or an installation situation at a corner. The damaged segment no longer lights up, the solder joints, LED chips or carriers have been damaged.

RIGHT: If an LED stripe is to be laid vertically around a corner, the bending radius cannot usually be maintained. To avoid the problem described above, the stripe should be cut at a marked point and routed over the corner using a soldered wire connection.

WRONG: The LED stripe was bent within the segment. As a result, solder joints, LED chips and/or substrates have been damaged and the damaged segment begins to flicker or no longer lights up permanently.

RIGHT: If the LED stripe is to be laid horizontally around a corner, the stripe must be cut at a marked point and led around the corner using a soldered wire connection.

WRONG: The LED stripe was bent horizontally around the corner. The result: solder joints, LED chips and/or carriers have been damaged and the damaged segment begins to flicker or no longer lights up permanently.

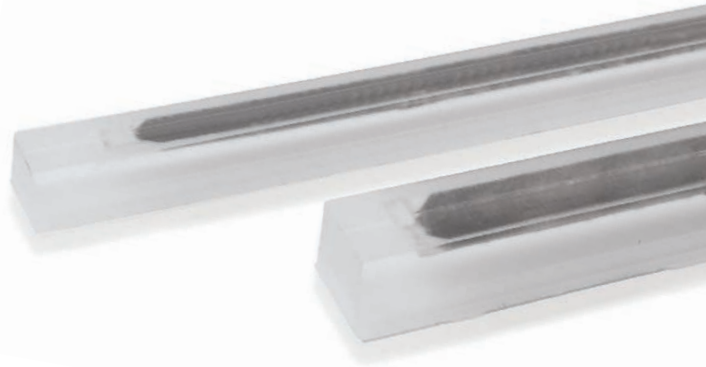

CUSTOMISED SOFT GROUTING

Precisely fitting, flexible and of the highest quality - that's what we stand for and give you a 5-year guarantee. All assembled tapes are delivered with a 3m feed on one side and open tinned wire ends.

INSIGHT AND BACKGROUND KNOWLEDGE ABOUT A PRODUCT MADE IN GERMANY WITH A LOT OF KNOW-HOW

Here we show you the assembled strips from the back. You do not see the installed LED stripe here, but a metal stripe. The metal stripe is responsible for several things:

- it provides a flat and clean support surface for mounting the LED stripe
- it not only serves as a carrier for the LED stripe, but also enables precise positioning in the potting mould
- it improves the heat distribution/dissipation of the stripe
- it stabilises the completely assembled / moulded stripe

Below you can see a side view of the assembled tape. Through years of experience in potting technology, you receive a product of the highest quality and a great deal of know-how. The following design details are leading in this respect:

- The metal support with LED stripe is completely enclosed by the potting compound [floating potting, IP67 guaranteed].
- The cores of the feed are encapsulated in a kind of wave and the potting compound completely encloses the cores. [IP protection guaranteed, additional strain relief to protect the solder contacts from damage or breakage].
- Compared to the coloured top layer, the feed is cast slightly backwards, so that space is gained to better align the cores depending on the connection situation on site.
- The LED stripes are encapsulated with different flexible materials [different colouring / light transmission]. The clear potting in the lower area ensures the highest possible lumen yield and the upper milky coloured area ensures a homogeneous light pattern.
- The potted LED module fits perfectly into the corresponding tile profile, so there is no cavity for moisture or dirt.

SOFT GROUTING – THIS IS HOW IT WORKS

You know which tile profile you would like to install or has already been installed?

Please take this information and select your profile series from the table below. Depending on the profile series, you will receive 1 to 2 light colours for your profile to choose from. After determining the desired light colour, find out the article number of your soft cast. Smallest possible length 80 mm, longest possible length 2980 mm [depending on the length of the profile]. Tolerance +/- 2mm

You will receive a customised / encapsulated LED stripe incl. 3m feed and open tinned wire ends. You can press this stripe into your existing or separately available profile and remove it again if required.

HARD GROUTING – THIS IS HOW IT WORKS

Do you have a heavy-duty application, e.g. walkable or water-protected?

Select the appropriate profile and end caps [if available] for your application. Please make sure that you select a profile that covers the required minimum inner profile width. This ensures that the LED strip is completely enclosed by the potting compound [floating potting, IP68 guaranteed]. The required minimum inner profile width can be found in the table below. After determining your profile and the desired light colour, please also refer to the table for the article number of your hard encapsulation. Smallest possible length 80 mm, longest possible length 3980 mm [depending on the length of the profile]. Tolerance +/- 2mm

You will receive a customised / encapsulated LED stripe in an optionally selected profile with a 3m-feed and open tinned wire ends. Make sure not to deform the encapsulated profile during installation.

GENERAL INFORMATION

A required potting projection of at least 30 mm is included in the requested dimension. This ensures tightness on the cable side and on the end piece. If a desired dimension is specified for which the potting projection cannot be maintained, the LED stripe is shortened by one segment and conveyed.

The prices quoted are per running metre. Invoicing is per metre or part thereof. Please note that after delivery we cannot accept any liability for further treatment or processing on your part or for positioning and attachment. As this is a custommade product, it cannot be exchanged or returned.

D FLEX LINE – FLEXIBLE IN MANY WAYS

Are you looking for a flexible, water-protected and homogeneously illuminated LED stripe? With our D FLEX LINE series, we combine all requirements in one continuous row. Our D Flex Line stripes are available in two basic versions, as Top View and Side View. The difference lies in the built-in positioning of the LED stripes, because this results in two significant differences in the possible mounting / placement of the stripes.

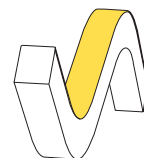

Due to a completely flexible potting, the D FLEX LINE achieve a degree of protection of up to IP68 as well as a completely homogeneous light pattern in the different LED stripes versions warm white, RGB and RGB + warm white due to the respective placement of the LED stripe. The shape and encapsulation also have a significant influence on the radiation behaviour of our strips, allowing you to achieve a beam angle of up to 180°.

The maximum total length to be operated is 5m. You can shorten the continuous rooflights at the and marked points. Each D Flex Line stripe is supplied with a feed and secondary feed of 3m each. This ensures a flexible, convenient and simple installation is guaranteed. The feed is supplied with tinned wire ends. In addition, our D FLEX LINE tapes are flame retardant and resistant to UV, chlorinated water, salt water and commercial cleaners [note content concentrations, not sea water resistant].

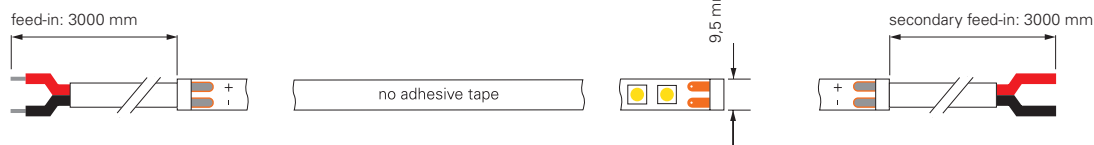

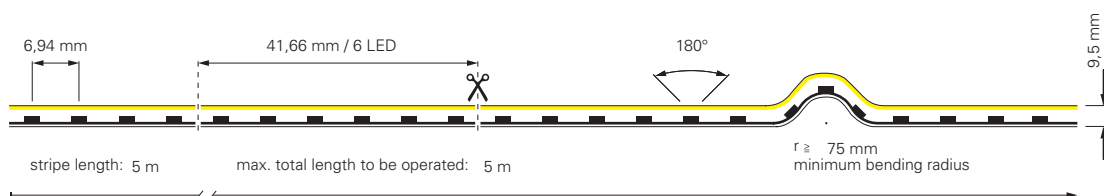

TOP VIEW

The LED stripe is arranged / installed horizontally, which means that the flex stripe can be bent up and down. [note the respective minimum bending radius]

230V | 1CH

This LED stripe is ideally suited if the requirements and focus are on flexible, water-protected and long-lasting lighting routes in indoor and outdoor areas.

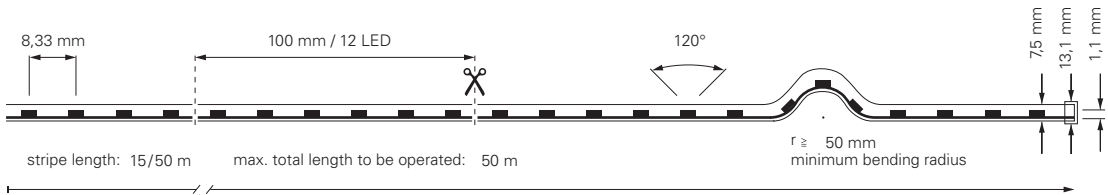

Due to the voltage of 230V, no additional power supply unit is required. The delivery is ready for connection with mounted Schuko plug and moulded endcap.

The LED stripe can be dimmed from 100% to 40% by a phase on/phase off dimmer to suit the requirement or ambient lighting.

Applications of large distances, such as on buildings or hotel corridors can be operated in one piece up to 50m.

STEP BY STEP GUIDE:
ADDITIONAL FEED | ATTACH FLEX CONNECTOR TO 230V LED STRIPE

ALL STEPS EXPLAINED IN DETAIL

The assembly may only be carried out by a qualified electrician. Please ensure that the 230V LED stripe is disconnected from the power supply during assembly / processing and is secured against being switched on again.

- 1 Shorten the 230V LED stripe at one of the marked / designated points.
- 2 Position the sealing ring around the contacts of the feeder / flex connector plug and push it into the plug as far as possible.
- 3 Bring the plug and LED stripe together. The plug contacts must be inserted on the underside of the LED stripe so that the two components are electrically connected to each other.
- 4 The plug and LED stripe are precisely matched to each other, so the two components must be plugged together as far as possible with a little force [push LED stripe into plug].
- 5 Firmly press the connected components [plug and LED stripe) all the way down into the connection box.
- 6 Place the cover of the connection box at an angle to the wings and press it down with a tilting movement.
- 7 Screw the closed connection box with the two pointed screws [as shown on the housing] from above.
- 8 If the positioning fits, press the two components firmly together. If the silicone adhesive presses on the page, between the inside of the junction box and the plug / LED strip, this is desired. LED stripe presses upwards, this is desirable. This way you can be sure that the silicone glue has been distributed in the inner lower area.
- 9 After complete assembly, check the strength of the connection visually and by bending slightly. When assembling the flex connector, steps 2-9 must be carried out twice [left/right page].
- 10 Setzen Sie den Deckel der Anschlussbox schräg an den Flügeln an.
- 11 Press the lid down firmly with a tilting motion. If the silicone glue pushes out from the sides and top, this is desirable. This way you can be sure that the silicone glue has been distributed inside under the cover.
- 12 Screw the closed connection box with the two pointed screws [as shown on the housing] from above.
- 13 Screw together with the two flat screws [as shown on the casing] from the page.
- 14 Remove excess adhesive without leaving any residue by using a suitable cloth.
- 15 After complete assembly, check the strength of the connection visually and by bending slightly. When assembling the flex connector, steps 2-15 must be carried out twice [left/right page].
- 16 illustration shows the newly mounted feeder
- 17 illustration shows the newly mounted flex connector

STEP BY STEP GUIDE: ATTACH ADDITIONAL END CAP TO 230V LED STRIPE

ALL STEPS EXPLAINED IN DETAIL

The assembly may only be carried out by a qualified electrician. Please ensure that the 230V LED stripe is disconnected from the power supply during assembly / processing and is secured against being switched on again.

- 1 After shortening the 230V LED stripe, you get an open, unprotected end.
- 2 Fill the endcap about 20% - 25% with gel glue. Try to avoid air pockets.
- 3 Endcap and LED stripe are perfectly matched to each other and must be communicated.
- 4 For safety reasons, the endcap sits very tightly on the LED stripe, so the two components must be pushed together with some force. Push the two components together as far as you can. Gel glue is pressed out of the endcap and is desired. This way you can be sure that the adhesive has been distributed inside.
- 5 Remove excess adhesive without leaving any residue by using a suitable cloth.
- 6 illustration shows the newly mounted endcap

- The assembly/processing may only be carried out by a qualified electrician.
- All relevant regulations in connection with the operation of 230V equipment apply.
- To guarantee tightness, take the utmost care to ensure clean and correct processing.
- No liability can be accepted for further processing on your part or for the resulting tightness, positioning and attachment.

power supplies

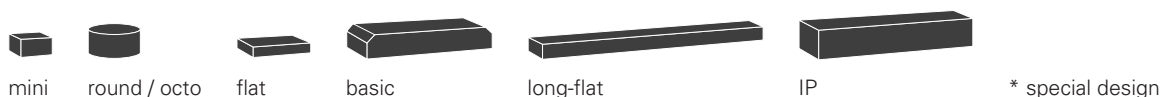

QUALITY, VARIETY AND TECHNICAL DATA FOR YOUR ELECTRICAL PLANNING

THE RIGHT POWER SUPPLY UNIT FOR EVERY APPLICATION

The DEKO-LIGHT power supplies are available in different designs. This means you always have exactly the right power supply unit in the right size for every installation situation and every application. Universally applicable, in best and proven quality.

power supplies design

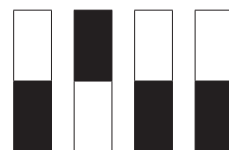

DO YOU ALREADY KNOW OUR LONG-FLAT POWER SUPPLIES?

These power supplies have a lot of power up to 150 watts of concentrated power with a cross-section of just 30 x 22 mm! This power supply unit therefore fits in almost all ceiling covers, shadow gaps or in all other installation situations with little space.

MULTI-POWER SUPPLIES FROM DEKO-LIGHT

All power supplies of the Multi series have one thing in common: They are incredibly versatile and are real multitaskers in daily use. Currently, they are mostly found in the area of constant current power supplies [CC] and can be individually adjusted by means of small microswitches, so-called DIP switches. Therefore different current intensities with different voltage ranges can be selected. For the technician on site, this means that he can supply more than 90% of all common luminaires and control standards very flexibly and with only a few different types of power supply units.

DIP switches on 1 2 3 4

Tip:

If a LED light [CC] is too bright and you want to dim it permanently without having to install additional components, then simply use one of the lower currents of a compatible multi power supply.

WIRE CROSS SECTION

When installing voltage-stable [CV] or current-stable [CC] power supply units and associated components, always ensure that the cable cross-sections are sufficiently dimensioned, especially with regard to the dependence of the cable length.

The specified cable cross-sections [mm²] were adapted to the commercially available cross-sections. The maximum cable length of 10 m should not be exceeded. »Red values« must be avoided urgently.

PLANNING ELECTRICAL INSTALLATIONS EVEN BETTER

You will certainly notice the new technical data when browsing through our power supplies and ask yourself what it is all about? In future, we would like to support you even better in the planning and dimensioning of your installations. The background to this is that more and more power supplies for lighting are already being installed in standard buildings [directly in the luminaires or as an external power supply].

Due to the inrush currents inherent in the design, e.g. after a power failure and the subsequent simultaneous start of all power supplies, an overload of the circuit breakers may occur. In order to be able to take this into account during the planning stage, we provide you with the necessary data for all our power supplies.

INRUSH CURRENT

In future, you will find the specification of the maximum inrush current directly with our power supply units. The maximum current value [amperes/A], is specified in connection with the respective time [microseconds/ μ s] and defines when exactly the highest current consumption occurs after the mains voltage is applied. You will find this limit value again with many manufacturers in the data sheets of corresponding components, as this can lead to an overload/damage.

DEKO-LIGHT POWER SUPPLIES | DESIGN FLAT

HOW MANY POWER SUPPLY UNITS PER CIRCUIT BREAKER?

The maximum number of power supply units that may be connected to the respective circuit breaker is directly dependent on the inrush current. In our quick finders you will find the number for the most common types of circuit breaker [B10A, B16A, C10A, C16A].

CAPACITIVE LOAD OF POWER SUPPLIES

Due to their design, power supplies sometimes represent very different capacitive loads. Especially in combination with motion detectors, twilight switches or switching/dimming actuators, this value [as with the capacitor in nF/pF], which is available for many power supplies and specified in our quick finders, plays an important role with regard to the suitability and durability of all components. Please also refer to the manufacturer's data sheets.

ABN SAFETY ISOLATING TRANSFORMER [DC] ACCORDING TO DIN EN 61558-1 PRIMARY DIMMABLE

A safety transformer requires stronger or double insulation and stricter checks apply. It is therefore suitable for applications according to DIN EN 61558 in the area of increased personal protection, e. g. for the operation of luminaires which are installed in swimming pools, fountains, wet cells or similar.

design example

LED SICHERHEITSTRANSFORMATOR

- dimmable via leading edge
- maximum load: 80% continuous operation
- suitable for indoor and outdoor use

872045	■	24V	12 - 60W	150 x 90 x 70 mm	299,95 €
872046	■	24V	30 - 150W	176 x 116 x 110 mm	399,95 €

With the kind support of Loxone Lichtinstallation Eurotec-Ibiza | Foto: fotoeichhorn

DEKO-LIGHT POWER SUPPLIES | DESIGN IP

- aluminium housing
- suitable for indoor and outdoor use
- short-circuit proof and overload protection
- overheat control
- dimmable via 1 - 10V

872011 12V 150W 0-12500mA 60A/300µs 223 x 70 x 40 mm **154,95 €**

HEP POWER SUPPLY LAV60W24V1C

- metal housing
- suitable for indoor use
- short-circuit proof and overload protection
- overheat control
- 1 - 10V dimmbar

872817 24V 60W 0-2500 mA 37,4A/171µs 280 x 30 x 27,5 mm **84,95 €**

design example

MEANWELL POWER SUPPLIES ELG/HLG-SERIES

- aluminium housing
- suitable for indoor and outdoor use
- flicker free
- short-circuit proof and overload protection
- overheat control
- dimmable via 0-10V / 1-10V

872117	<input type="checkbox"/>	ELG	48V	75W	0-1600mA	50A/350µs	180 x 63 x 36 mm	94,95 €	new

DEKO-LIGHT POWER SUPPLIES HV DMX 135W

Easy to install and compact DMX unit. A powerful 3 channel dimmer and a 135 Watt power supply are combined in one housing. This makes installation quick and easy. Controllable with all 3 channel control panels and DMX Controllers.

- aluminium housing
- suitable for indoor use
- short-circuit proof and overload protection
- supported DMX 512
- dimmable from 0 - 100%
- soft dimming without flickering
- with integrated 3-channel DMX dimmer

TIPS AND TRICKS FOR CURRENT-STABLE POWER SUPPLIES

In contrast to voltage-stable power supplies [CV] and as the name suggests, the output current of current-stable power supplies, often abbreviated CC [constant current], is stable. This means that the power supply unit limits the output current [e.g. 350 mA, 700 mA etc.] accordingly and adapts the voltage to the LED within the specified voltage range. From this circumstance some important factors result, which must be absolutely considered during planning and installation.

- Do not connect the LED to CC power supplies while they are live, as this may damage them and cause them to fail after a short period of operation.
- if necessary: operate max. 2 lamps in a series connection on one power supply unit
However, the voltage range and the power of the power supply unit must be checked for this purpose, as voltages are split due to the laws of series connection.
- If an LED light [CC] is too bright and you want to dim it permanently without having to install additional components, then simply use a lower current of a compatible power supply. Please also observe our note on the respective power supply units.
- if possible: 1 lamp = 1 power supply unit

Netzgerätedaten prüfen! Check driver data!

Installationshinweis für Netzgerät stromstabil [CC]: LED nicht unter Spannung anschließen!
installation instruction for power supply constant current [CC]: Don't connect LED under voltage!

BASIC INFORMATION ON THE USE OF DALI BALLASTS

DALI SINGLE DIMMER

DALI single dimmers cannot be integrated into existing DALI networks. The control takes place via so-called single dimmers, which generate their own control signal.

DALI BUS READY

These components can be integrated and controlled in existing DALI BUS systems that comply with the IEC 62386 protocol.

DEKO-LIGHT POWER SUPPLY | BASIC DALI CC DRIVER

DEKO-LIGHT MULTI-CURRENT DALI 2.0 POWER SUPPLIES IE-12D | IE-25D | IE-45D | IE-45HD | IE-75D

A must for every electrician: the new MULT-CC DALI 2.0 power supplies from DEKO-LIGHT are a real all-purpose weapon for universal use.

They can be controlled via DALI1 or DALI2 [fully upward and downward compatible] or via Intelli-Push. In this case, the multi-current-power supplies do not require any additional control components and are controlled by means of cost-effective 230V standard push-buttons. With the new Intelli-Push function, they also have a pioneering synchronisation option if one of the connected power supplies no longer runs synchronously with the others.

In addition, the MULTI-power supplies can also be operated undimmed without control as a reliable and universal power supplier. With a total of five models, the new DALI series covers a CC current range from 180mA to 1600mA and power ratings from 4 to 75 watts.

- plastic housing
- compact housing design
- suitable for indoor use
- flicker free
- short-circuit proof and overload protection
- overheat control
- current range adjustable via DIP switch
- DALI 2.0 BUS capable according to IEC 62386 protocol
- fully downward compatible with DALI 1.0
- Dimming range: 1-100
- dimmable via DALI or touch dimmer function [push]
- new Intelli-Push function [key combination synchronises all connected power supplies]
- can also be operated without control as universal power supply unit universal power supply [no dimming function]
- 3.2-75 watts and 37 CC variants in only 3 different housing sizes

OSRAM HALOTRONIC MOUSE TRANSFORMERS

The Osram Halotronic Mouse Transformer is ideal for confined spaces. The Halotronic Mouse series is dimmable via leading or trailing edge dimmers. With the 150VA version, you have the option of primarily looping on using two pairs of terminals.

- electronic transformer [12V]
- lamp protection voltage
- plastic housing
- suitable for indoor use
- short-circuit proof and overload protection
- dimmable with compatible [C-compatible] trailing or leading edge phase dimmers

DEKO-LIGHT QUASAR – THE SMART UNIVERSAL CONTROL FOR LIGHT & CO.

Our new and universal Bluetooth control »Quasar« enables you to use and control all common lighting components such as lights, lamps, LED strips etc. as well as electrical devices with 230V mains voltage.

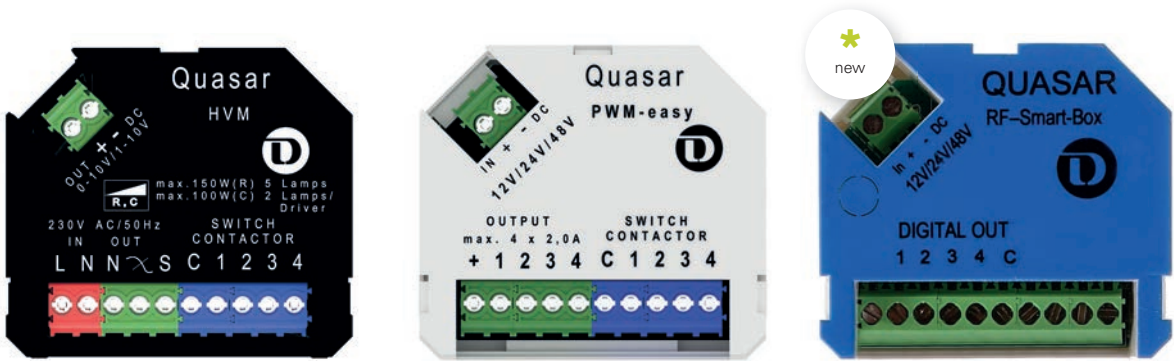

You decide whether you want to do this conveniently via smartphone, tablet and / or light switches. Through the integrated inputs for conventional light switches, »Quasar« can be perfectly integrated into an existing electrical installation and thus also into the existing switch range. It does not matter whether you want to plan, modernize or expand a new building.

Thanks to the pre-configured Quasar modules [see Fig.] installation and commissioning are child's play. Immediately after connection, all necessary function tests of the connected components can be carried out. This reduces installation costs and increases efficiency.

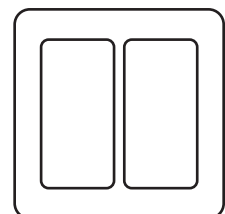

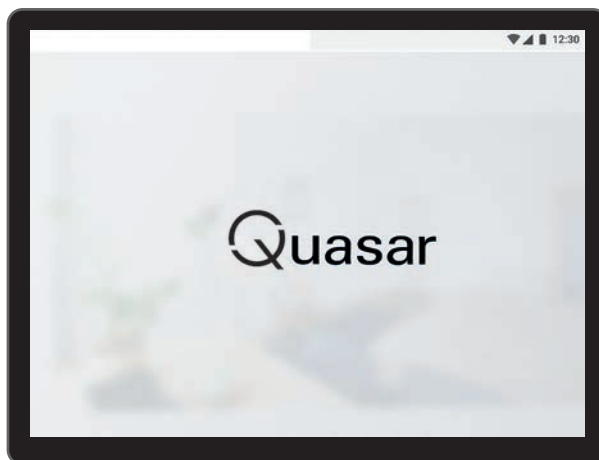

With the app, we also made sure to create a user-friendly and intuitive user interface. It controls both all standard functions that are also available when operated with switches, as well as the many additional and automatic functions that make your lighting control system »smart« and comfortable. So there are almost no limits to your imagination.

Speaking of limits – thanks to the latest Multi-Protocol-Mesh-Technology and the interaction of the individual modules, these automatically connect to form a network with which even complex lighting control networks with extensive requirement profiles can be set up. Every module is part of the network and thus also extends the range of the radio network, but can also be completely independent.

Quasar is simple, flexible, comfortable, safe and incredibly smart.

original size

WHAT CAN QUASAR CONTROL?

By using the two modules [see pages 802-805] there are countless connection options for almost all types of common lights, illuminants and components. From conventional light bulbs, LED / retro-Fit lamps, LED lights with permanently installed electronic ballasts, power supplies with 0-10V / 1-10V control input, 1-4 channel LED strips and all compatible devices and consumers that can be switched or dimmed using 230V mains voltage.

OPTIONAL OPERATING MODES

Depending on the Quasar module used and the connected one consumers can select the required operating mode quickly and easily. Switching, dimming, different modes for 1-4 channel LED strips and a special sensor mode enable previously unimagined control options and functions.

RANGE AND SECURITY

By using the latest microprocessors and encrypted Multi-Protocol-Mesh-Technology, the Quasar modules offer maximum security and maximum range. Each module also serves as a repeater within the network and increases the range accordingly. Any Quasar module can be used as a repeater to connect controllers that are too far away. Both the Quasar control modules and the Quasar app can be kept up to date by software updates if required. So you always enjoy the full and updated range of functions.

EASY AND QUICK INSTALLATION

Due to the compact design and depending on the application, the modules can often be installed almost »invisibly« directly in the junction box, in the lamp canopy or with the power supply. The modules are already pre-configured for the most common applications, which means that the most important functions can be operated and tested using the switch inputs after installation, even without using the Quasar app. A multi-coloured signal LED inside the module provides information about the operating status and any faults at any time.

CUSTOMIZE SWITCHING SIGNALS

Many switching parameters such as the duty cycle, dimming behaviour, soft start, switch-on and switch-off delays as well as the minimum and maximum brightness can be adapted to the respectively connected lights or consumers.

FLEXIBLE USE AND OPERATION

The modules can be used as individual, autonomously operating controllers or in combination with many others controllers they work in networked operation. No central control unit is required. Every controller can be operated by up to 4 buttons, by app for smartphone / tablet or in combination with app and button respectively. This ensures that you can switch the lighting quickly and easily always on entering or leaving a room.

EASY APP START-UP AND CONTROL

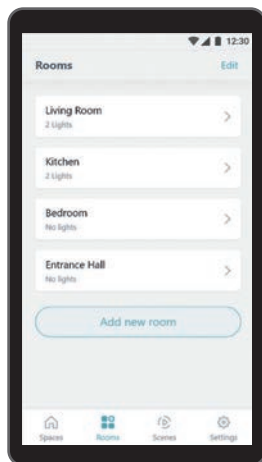

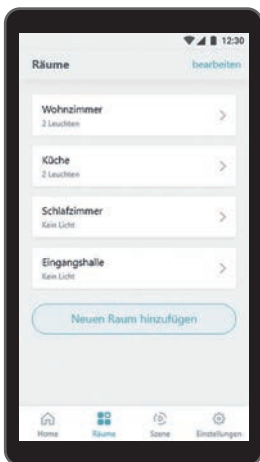

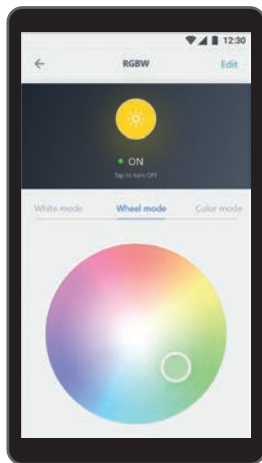

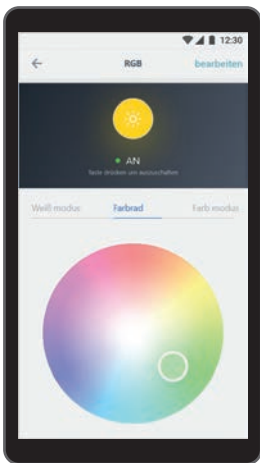

If you want to operate the Quasar modules with a smartphone or tablet [Android / iOS, compatible from BT4.2], download the Quasar app - available free of charge in the App / Play-Store and install the app. Then everything is lightning fast: create a free user account via the intuitive menu, log in, set up the rooms in which Quasar modules are installed, scan the assembled and operational controllers and configure them according to your wishes. Your smart Quasar network is ready.

QUASAR – THREE MODULES, INFINITE POSSIBILITIES

With the help of the Quasar house on the right, we would like to better illustrate the various possibilities that may arise from the use of the modules. If you take a closer look, you will surely recognize application scenarios from your environment very quickly. Let your [control] wishes and thoughts run free! You will be sure to recognize many other exciting applications in a very short time that can make your house installation safer, complement it, upgrade it or simply make it more convenient.

Quasar is simple, flexible, comfortable, safe and incredibly smart.

EXTERIOR LIGHTING

By using a Quasar module, for example, a time-controlled night light with a defined minimum brightness can be switched on or by linking to a motion detectors. This creates security and also protects your wallet.

GARDEN AND PATHS

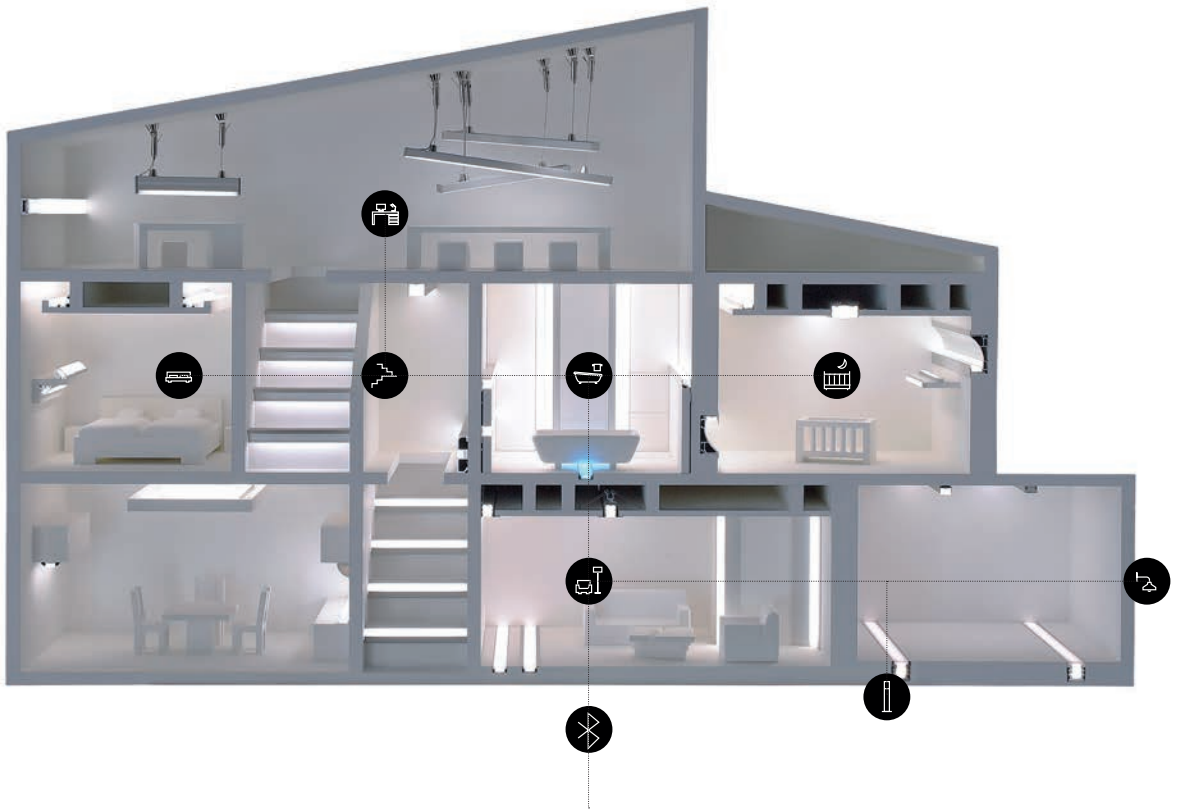

By illuminating paths, natural stone walls, sculptures or plants you create a very special and magical ambience. You can easily control everything with the Quasar modules. Here you have the choice whether automatic or time-controlled programs, linked motion sensors or whether you want to control the lighting manually.

Our tip: With a few additional components, you can switch many 230V consumers with the Quasar HVM controller. e. g. automate a fountain or circulation pump of a swimming pond from a distance or switch manually.

STAIRS AND HALLWAYS

VNetwork different luminaires that previously had to be switched on and off individually due to the lack of cables, to one area. In addition, the light control can be automated by an automatic timer and, incidentally, a lot of electricity can be saved.

LIVING AREAS

Individual lights or the complete lighting equipped with Quasar can be controlled. It does not matter whether luminaires with classic lamps, LEDs with ballasts or LED strips are installed. With Quasar everything can be controlled at a glance and comfortably from a central location using a smartphone or a conventional button.

CHILDREN'S ROOM

Wake up your kids with slowly brightening lights [wake-up sunrise] or let them fall asleep with a sunset simulation. Of course, all other common lights can also be controlled. If desired, all functions can also be started via smartphone or tablet.

OFFICE

Use the new possibilities of an HCL control [Human Centric Lighting], in which the light colour and intensity are automatically adjusted to the time of day and the location. The positive effect of a light adapted to the daily rhythm increases well-being considerably.

BEDROOMS

In addition to bedroom lighting, control all of the quasar modules throughout the house comfortably from your bed. So you never have to get up to switch off forgotten lights.

PANIC BUTTON

Create additional security e.g. by linking a button of a Quasar module with other components in the bedroom. In this way, you can easily and inexpensively install one or more »panic buttons« in your installation. As soon as you press this button, the light goes on on all linked modules and thus possibly also outdoors, and any intruders are deterred.

BATHROOM / WELLNESS

Transform your bathroom into a wellness area and control, for example, coloured LED strips with Quasar. Dim lighting and automatic colour changes complete the installation and make the controls child's play.

Our tip: With a few additional components, you can control many 230V consumers with the Quasar HVM controller for example switching on an additional heater from a distance.

DEKO-LIGHT QUASAR HVM 230V DIMMING AND SWITCHING WITH A SMARTPHONE AND / OR BUTTON

With this small module, which is directly in a junction box or can be installed in a lamp canopy suitable lights, power supplies or other compatible 230V components can be dimmed or switched directly. Via the 0-10V / 1-10V control output, power supply units with the corresponding control input can still be dimmed and switched.

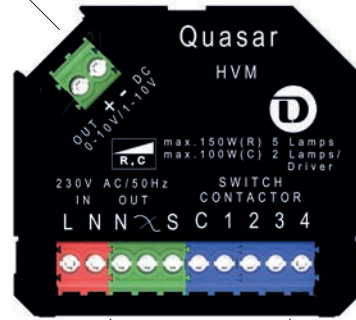

With the additional sensor function of the module, all commercially available motion detectors, twilight switches etc. that are equipped with a 230V switching output can become a radio actuator. The problem solver wherever there are no corresponding cables.

Commissioning is child's play thanks to many preconfigured scenes. To be able to use them, you only need to connect potential-free buttons [1-4 depending on the function]. Since standard push buttons are used, you can integrate Quasar into any existing electrical installation and thus into the switch ranges of all manufacturers.

DEKO-LIGHT QUASAR PWM-EASY 1-4 CHANNEL STRIPES AND LED CONTROLS WITH SMARTPHONE AND / OR BUTTON

This small module can be installed directly on the corresponding power supply or in a nearby junction box and controls all common 1-4 channel LED stripes and lights [single, WW / CW, RGB, RGBW] which are operated with a voltage of 12V, 24V or 48V DC and controlled by PWM control.

As with the HVM module, commissioning is child's play thanks to the many pre-configured scenes. To be able to use them, you only need to connect potential-free buttons 1-4 depending on the function]. Since standard push buttons are used, you can integrate Quasar into any existing electrical installation and thus into the switch ranges of all manufacturers.

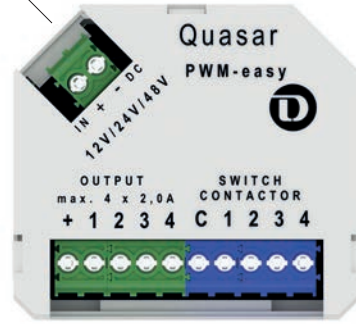

With this module, too, you have the option to control all basic functions as well as countless additional functions with the Quasar app for compatible Android and Apple smartphones [BT from 4.2]. The configuration and operation is simple and intuitive.

DEKO-LIGHT QUASAR RF-SMART-BOX NOT ONLY TAKES EXISTING INSTALLATIONS TO THE NEXT LEVEL

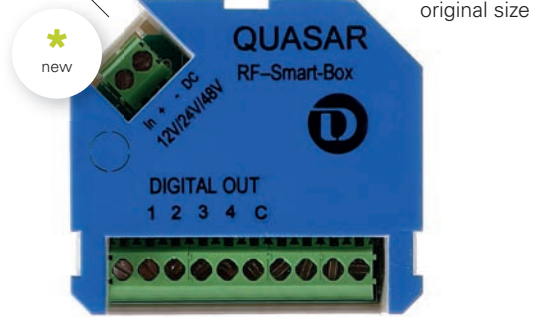

The small blue RF Smart Box is a real all-rounder, because on the one hand it makes it possible to operate an existing LED stripe installation, which was previously controlled with the popular DEKO-LIGHT RF system via remote control, can now be operated with a smartphone and thus benefit from the possibilities and advantages of a modern control system.

The conversion is very simple: connect the RF Smart Box to the existing LV power supply, plug in the RF controller and you're done! Afterwards, the app, which is available free of charge, can be put into operation and adapted accordingly.

Furthermore, there are no more performance limits to your planning with Quasar. Using the RF-Link control signal, you can control one or more RF controllers connected via RJ45 cable simultaneously. In this way, you can also realise high performance requirements of more complex or extensive installations.

DEKO-LIGHT CONTROLLER TC-2

The TC-2 controller is a touch panel, allowing the storage and retrieval of up to 4 storage locations. Scenes and atmospheres are created quickly in a user-friendly manner with the aid of the intuitive controller. It suits both hotels and auditoriums, as well as the home and living space.

- touch interface
- optional DMX512 or analogous 0-10V
- fade time setting from 0.01 to 10s
- dimming steps 0-100%
- LED Display
- 4 storage locations
- DMX out / DC in / 0-10V out: connection terminals
- dimensions L x W x H: 86 x 86 x 15,3 mm

DEKO-LIGHT TOUCH 16CH PRO

The Touch 16CH Pro controller is a touch panel, allowing the storage and retrieval of up to 4 zones with 4 channels each. Scenes and atmospheres are created quickly in a user-friendly manner with the aid of the intuitive controller. It suits both hotels and auditoriums, as well as the home and living space. As a design element, the Touch 16Ch Pro is ideally implemented in the living space.

- colour mode for setting the colours in each individual zone
- program mode for the colour change and fader setting for each zone
- time mode for setting the start and end time of the programs
- 14 pre-installed or 8 auto-created programs can be assigned to one scene
- internal clock to switch the zones time-dependently with the saved programs
- DMX out / DC in: connection terminals
- dimensions L x W x H: 86 x 86 x 15,3 mm

DEKO-LIGHT LED DMX TOUCH 16C

The LED DMX TOUCH 16C is provided with 4 zones with 4 channels each. In total, 16 single channels are available. At the selection of one of the zones (Z1-Z4), the touchwheel controls all 4 channels of this zone. At the selection of one channel (C1-C4) in one zone, the touchwheel controls this selected channel. If neither a zone nor a channel is selected, the touchwheel controls all zones, including their channels. Please note that the controller was specifically designed for warm and/or cold white end devices. By its functions, it is only conditionally implemented for RGB or RGBW end devices.

- background illumination and touch signal tone optionally connectable
- memory function: the DMX Touch 16C memorizes the most recent brightness setting of all zones and channels
- DMX out: CAT5 [RJ45] opt. connection terminals
- dimensions L x W x H: 86 x 86 x 17,4 mm

DEKO-LIGHT ART 4 | RGB/RGBW

The ART 4 controller is a touch panel for playing and editing colour programs, specifically for RGBW end devices. Up to 4 atmospheres and up to 4 scenes can be saved and retrieved. The ART-4 contains 4 function menus: Selection of integrated programs, colour, brightness, speed setting. Scenes and atmospheres are created in a quick and userfriendly manner. As a design element, the ART 4 controller is ideally suited in the environment and is an appropriate choice both for hotels and auditoriums and the home and living space.

- PWM out for the direct control of LED stripes
- control element and controller via touchwheel
- fade times of 0-4 seconds possible
- DMX out / DC in: connection terminals
- dimensions L x W x H: 86 x 86 x 15,3 mm
- integrated PWM dimmer 12/24V, 4 x 2A

189,95 €

DEKO-LIGHT ART 9 | RGB/RGBW

The ART 9 controller is a touch panel for playing and editing colour programs, specifically for RGBW end devices. Up to 9 atmospheres and up to 9 scenes can be saved and retrieved. The ART-4 contains 4 function menus: Selection of integrated programs, colour, brightness, speed setting. Scenes and atmospheres are created in a quick and userfriendly manner. As a design element, the ART 9 controller is ideally suited in the environment and is an appropriate choice both for hotels and auditoriums and the home and living space.

- PWM out for the direct control of LED stripes
- control element and controller via touchwheel
- fade time setting for switch on/off and colour change
- function memory and power failure protection
- DMX out / DC in: connection terminals
- dimensions L x W x H: 172 x 86 x 15,3 mm
- integrated PWM dimmer 12/24V, 4 x 2A

DEKO-LIGHT X-FADE-6

The X-Fade 6 is a modern wall controller on the DMX basis for LED dimmers. Up to 6 faders can be directly controlled and connected to RGB dimmers. For example, 2 RGB stripes are addressed and also 6 single one-colour stripes can be controlled in 6 different zones. The X-Fade 6 is further used as a standard 6 channel DMX Controller, which enables the control of DMX dimmers or devices with up to 6 channels. Additionally, up to 6 different programs can be retrieved. Each program can contain up to 100 steps. Programs can also be controlled automatically. [A mounting box is required for the assembly of the controller.]

- incl. IR-remote control
- 6 programmable scenes
- fade time setting
- DMX out / DC in: connection terminals
- dimensions L x W x H: 86 x 86 x 16,3 mm

EUROLITE DMX-CONTROLLER LED COLOR CHIEF

The COLOR CHIEF is an innovative and easy to use DMX controller, which is optimally tailored to the needs and requirements of gastronomy, bars, event locations, event rooms, etc. . It is suitable for controlling e. g. LED stripes, lights, spotlights, light effects and all other components with 1-6 colours [WW, CW, WW-CV, RGB, RGBW, RGBWAUV] or

up to 30 channels, which can be controlled with DMX via corresponding controller/dimmer. 24 different and directly selectable scene buttons allow access to previously stored lighting scenes or program sequences. The USB interface can be used to save the created programming to a USB memory stick and, if necessary, to restore it.

- easy control of LED stripes, lights, headlights or similar with 1-6 colors or simple lighting effects with up to 30 channels
- for up to 8 different device groups/zones
- fast and easy programming
- extensive, already pre-installed device library with many common applications
- additional devices can be easily added manually
- 8 colour effects directly selectable
- three additional channels are freely assignable per device [e.g. for special functions, movements, etc.]
- colour wheel selection
- 24 memory slots for permanently stored lighting moods
- USB port for data storage / restoration of programming
- clock control with programmed chases via music signal
- total dimming, fade time between individual scenes comfortably adjustable
- 3-pin XLR connector
- firmware-Update via USB
- operation as rack installation [19 "/ 3 height units] or desktop unit
- control: DMX / max. 240 channels
- power supply: power cable with power adapter [included]
- weight: 2,2 kg
- protection class: IP20
- connection power: 10 W
- dimensions L x W x H: 483 x 132 x 85 mm

EUROLITE DMX-CONTROLLER LED EASY DELUXE

The LED EASY DELUXE is a very simple and intuitive DMX controller that can be used for a wide range of applications. No matter if commercial or private, wherever LED stripes, lights, spotlights with 1-6 colours [WWW, CW, WWW-CW, RGB,

- easy control of LED stripes, lamps, spotlights etc. with 1-6 colours
- for up to 4 different device groups/zones
- quick and easy commissioning thanks to pre-installed programs
- single DMX channels for red, green, blue, white, amber and UV
- 12 memory slots for permanently stored lighting moods
- 4 colour controls with 12 colours each
- 4 brightness controls

RGBW, RGBW-A-UV] and DMX are controlled via corresponding controller/dimmer, this new DXM controller finds its application. It is very easy to directly select 12 different stored light moods/scenes using a rotary control.

- function buttons for blackout, auto, music control and strobe effect
- fader for overall brightness, sequence and fade time
- 3-pin XLR connector
- operation as a tabletop device or built-in device
- control: DMX / max. 24 channels
- power supply: power cable with power adapter [included]
- weight: 1,2 kg
- protection class: IP20
- connection power: 10 W
- dimensions L x W x H: 260 x 140 x 65 mm

DEKO-LIGHT R-DMX 3+1

RDM means »Remote Device Management«. This remote device management enables the control of the RDMX 3+1 from the control panel. This provides a great advantage, specifically for inaccessible installations or sites that are difficult to reach. If RDM is not available, the DMX address assignment can also be set manually via the DIP switch.

- complies with the DMX 512/1990, RDM protocol/2009
- supports automatic DMX addressing
- incl. top-hat rail adapter
- incl. 2m CAT5 cable [RJ45]
- flicker free
- connection: terminals
- dimensions L x W x H: 120 x 43 x 23 mm
- max. 4A each channel
- power: 4x 48W [192W] at 12V,
4x 96W [384W] at 24V

DIMMER | LEADING EDGE

suitable for dimming of:

- R loads [light sources] 20 - 500 W
- L loads [conventionally wound transformers] 20 - 500 W
- max. 5 electronical ballasts
- suitable for 68 mm floating boxes

100484 white

69,95 €

DIMMER | TRAILING EDGE

suitable for dimming of:

- R loads [light sources] 10 - 350 W
- C-Lasten [elektrische electronical ballasts] 10 - 350 W
- max. 5 electronical ballasts
- adjustable minimum load / brightness
- perfectly maTCHED TO DEKO-LIGHT power supply
- suitable for 68 mm floating boxes

930060 white

59,95 €

DIMMING VIA LEADING / TRAILING EDGE

Please always ensure that the dimmer used is suitable for new installations and especially when retrofitting existing systems. You will find information on the housing as well as in the technical data sheets for which type of load, power and quantity of ballasts they are suitable.

types of electrical loads:

[R] = Ohmic load = light bulb, high-voltage halogen etc.

[L] = Inductive load* = Wound transformers

[C] = Capacitive load* = High voltage LED, all electrical transformers.

* Unless otherwise stated, max. 5 [C-load] or 2 [L-load] ballasts/lamps per dimmer.

You would like to dim and switch 230V components from several locations, but do not have the required number of cores in the existing installation? Then the following

universal dimmer switches are ideally suited for simple and problem-free integration for both existing and new installations.

ELTAKO DIMMER UNIVERSAL 400W EUD12NPN-UC

- control via standard pushbutton
[control voltage 10V-230V AC+DC]
- short keys [on / off], long keys [dimming 0-100-0%]
- suitable for R-L-C loads up to 400W, high voltage LEDs up to 100W, automatic load detection, memory-function, adjustable minimum load and dimming speed
- dimensions L x W x H: 20 x 90 x 70 mm

843042  blue **99,95 €**

ELTAKO DIMMER UNIVERSAL 400W EUD61NPN-UC

- control via standard pushbutton
[control voltage 10V-230V AC+DC]
- short keys [on / off], long keys [dimming 0-100-0%]
- suitable for R-L-C loads up to 400W, high voltage LEDs up to 100W, automatic load detection, memory-function, adjustable minimum load and dimming speed
- installation in junction box possible
- dimensions L x W x H: 45 x 45 x 18 mm

843043  blue **94,95 €**

ELTAKO LED-DIMMSCHALTER ELD61/12-36V

- control via standard pushbutton
[control voltage 10V-230V AC+DC]
- short keys [on / off], long keys [dimming 0-100-0%]
- suitable for 12V/24V/36V LED stripes and dimmable LED lamps
- power 48W bei 12V, 96W at 24V
- soft-off for lamp protection
- memory-function, adjustable minimum brightness / dimming speed
- dimensions L x W x H: 45 x 45 x 18 mm

843033  blue **89,95 €**

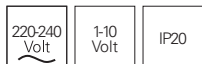

ELTAKO CONTROL DIM SWITCH SDS61/1-10V

- control via standard pushbutton [control voltage 230V], that generates a 1-10V control signal [max. 40 mA] at the output
- short keys [on / off], long keys [dimming 0-100-0%]
- suitable for dimmable power supply mit 1-10V control input
- switching output [ECG on / off] memory-function and adjustable dimming speed
- dimensions L x W x H: 45 x 45 x 33 mm

843044 ■ blue

89,95 €

HIGH FREQUENCY MOTION SENSOR | MD1200

- angle of coverage 360°
- detection range 1 - 10 m
- switching time 5 sec - 30 min
- daylight threshold 5 - 2000 Lux
- suitable for switching all common illuminants / electronical ballast [R- / L- / C-loads]
- max. 5 electronical ballasts
- dimensions L x W x H: 75 x 42 x 28 mm

930036 □ white

MAGIC SWITCH

The MAGIC SWITCH is the invisible switch for a variety of applications. Mounted on a plate back or incorporated into a blind hole, it detects the movement taking place on the front of the plate and switches. The MAGIC SWITCH works only in connection with non-metallic surfaces and materials such as wood, glass, ceramics up to a material thickness of 19 mm.

920132 ■ black

69,95 €

ELTAKO RC ELEMENT THREE-WAY RC12-230V

By inductive interference voltages on control and power lines, there is an increasing number of undesirable effects that linear LED lights, which have a very low power consumption, permanently glow or flash due to the design. By installing the RC extinguishing element in the electrical distributor [connection N, L1, L2, L3] inductive interference voltages are compensated / suppressed.

• dimensions L x W x H: 20 x 90 x 70 mm

843045 ■ blue

56,95 €

SURGE PROTECTION MIT KONTROLLANZEIGE

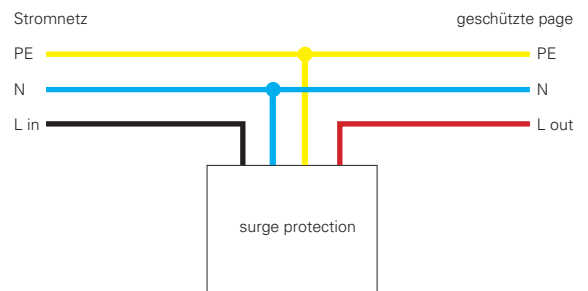

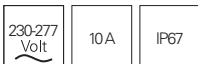

Compact overvoltage protection that effectively prevents the premature failure of LED lights due to problems in power grids. For protection of 1-phase operated, non-dimmable LED lighting systems. Control LED to indicate correct operation. Depending on the connection there is the possibility of load circuit disconnection in case of a fault. IP67 design for direct installation in luminaires or upstream in junction boxes.

WEIPU CABLE

When planning and installing low-voltage DC systems, always pay attention to the cable lengths. A total length of 10 metres must not be exceeded. Excessive lengths can lead to voltage losses within the cables, e.g. to different colour renditions of RGB spotlights or visible brightness differences. Malfunctions such as flashing, flickering or flashing of the lamps can also occur. Furthermore, each radiator should be supplied with a separate connection cable if possible. Avoid installations with more than 3 radiators within one cable harness.

WEIPU HQ

Our new Weipu HQ cable series provides the highest quality cables and connectors, as well as higher cable cross-sections for even more reliability and durability for the power supply and operation of the corresponding spotlights.

MULTI OUTDOOR CABLE DISTRIBUTORS

The more luminaires and accompanying lighting solutions are planned and project, the more complex the cable management becomes. A wide variety of cable and wire cross-sections come together and have to be connected as efficiently as possible. In outdoor areas, there are requirements added to protect cables against external influences. With the new, multifunctional cable connectors and distributors, you are perfectly equipped for these tasks.

All multi-outdoor cable distributors are supplied with the appropriate adapter sleeves in order to be able to insert different cable cross-sections, depending on the model.

- 2 LED support profiles
- 1 mounting profile

930107 43,6 x 30,6 x 20,5 cm

149,95 €

DEKO-LIGHT SAMPLE CASE LIGHT BASE & ACRUX

Our sample case with LIGHT BASE & ACRUX offers you the possibility to present your customers many variants with little effort. The LIGHT BASE in particular, with its variable cover and small design, is an all-rounder among wall luminaires. It fits into a 68mm switch box. It is preferable to use an electronic box with a bag for the ballast unit. With the exchangeable covers, you and your customers remain flexible right to the end.

However, the ACRUX is in no way inferior to it in this respect. With one lamp you show three variable light colours and, through the removable stainless steel cover, two surfaces. The permanently installed dimmable power supply unit rounds off the package. An investment that is sure to pay for itself quickly.
